"RENEWAL" CLEAN AIR ACT PERMIT PROGRAM (CAAPP) PERMIT

PERMITTEE:

Sun Chemical - General Printing Ink Division Attn: Zhaleh Naghibzadeh, Manufacturing Services Engineer 135 West Lake Street Northlake, Illinois 60164

I.D. No.: 031471AAE
Date Received: February 20, 2004

Application No.: 96030098

Date Issued: July 28, 2005

Expiration Date¹: July 28, 2010

Operation of: Printing Ink Manufacturing

Source Location: 135 West Lake Street, Northlake, Cook County 60164 Responsible Official: Grant Bush, Manufacturing Services Engineer

This permit is hereby granted to the above-designated Permittee to OPERATE a printing ink and coating manufacturing plant, pursuant to the above referenced permit application. This permit is subject to the conditions contained herein.

If you have any questions concerning this permit, please contact Jonathan Sperry at 217/782-2113.

Donald E. Sutton, P.E.
Manager, Permit Section
Division of Air Pollution Control

Sun Chemical Corporation 35 Waterview Blvd. Parsippany, New Jersey 07054

1.3 Operator

Sun Chemical - General Printing Ink Division 135 West Lake Street Northlake, Illinois 60164

Zhaleh Naghibzadeh, Manufacturing Services Engineer 708/236-3756

1.4 Source Description

The Sun Chemical - General Printing Ink Division is located at 135 West Lake Street in Northlake, IL. The source manufactures printing inks, coatings, wax compounds, and varnish. Bulk liquids are stored on site in storage tanks and are transferred to any of seven departments. Departments vary by equipment, process parameters, and products, and are identified as follows: ball mills, regular grinding, bulk grinding, cutters, blending, compounds, and ultraviolet. Base produced in one department may be further finished in another department. Base differs from finished ink in that finished ink refers to a final product that is shipped to a customer, whereas base is a concentrated form of ink and is used as a raw material in another process line or packaged and shipped to another location for further processing.

1.5 Title I Conditions

As generally identified below, this CAAPP permit contains certain conditions for emission units at this source that address the applicability of permitting programs for the construction and modification of sources, which programs were established pursuant to Title I of the Clean Air Act (CAA) and regulations thereunder. These programs include 40 CFR 52.21, Prevention of Significant Deterioration (PSD) and 35 IAC Part 203, Major Stationary Sources Construction and Modification (MSSCAM), and are implemented by the Illinois EPA pursuant to Sections 9, 9.1, 39(a) and 39.5(7)(a) of the Illinois Environmental

Protection Act (Act). These conditions continue in effect, notwithstanding the expiration date specified on the first page of this permit, as their authority derives from Titles I and V of the CAA, as well as Titles II and X of the Act. (See also Condition 8.7.)

- a. This permit contains "Title I conditions" that reflect Title I requirements established in permits previously issued for this source, which conditions are specifically designated as "T1."
- b. This permit contains Title I conditions that revise Title I requirements established in permits previously issued for this source, which conditions are specifically designated as "TIR."

3.0 CONDITIONS FOR INSIGNIFICANT ACTIVITIES

3.1 Identification of Insignificant Activities

The following activities at the source constitute insignificant activities as specified in 35 IAC 201.210:

3.1.1 Activities determined by the Illinois EPA to be insignificant activities, pursuant to 35 IAC 201.210(a)(1) and 201.211, as follows:

Varnish Storage Tank Nos. 44, 45, and 46
Resin Storage Tank Nos. 38, 39, and 40
Solvent-based Material Storage Tank Nos. 61, 68, 69, 118, and 41
Solvent Storage Tank Nos. 106 and 110
Solvent Storage Tank Nos. 109 and 119
8 Natural Gas Combustion Units

3.1.2 Activities that are insignificant activities based upon maximum emissions, pursuant to 35 IAC 201.210(a)(2) or (a)(3), as follows:

Non-VOM Storage Tank Nos. 26-28, 62-64, 70, 115, and 117 Storage Tank Nos. 35 and 121-123 (not currently in use) Resin Storage Tank Nos. 37, 42, and 43 Oil or Varnish Storage Tank Nos. 60, 66, 101, and 102 Oil or Solvent Storage Tank Nos. 107, 108, 111, and 112 Storage Tank Nos. 113, 114, 116, 120, and 124

- 3.1.3 Activities that are insignificant activities based upon their type or character, pursuant to 35 IAC 201.210(a)(4) through (18), as follows:
 - a. Direct combustion units designed and used for comfort heating purposes and fuel combustion emission units as follows: (A) Units with a rated heat input capacity of less than 2.5 mmBtu/hr that fire only natural gas, propane, or liquefied petroleum gas; (B) Units with a rated heat input capacity of less than 1.0 mmBtu/hr that fire only oil or oil in combination with only natural gas, propane, or liquefied petroleum gas; and (C) Units with a rated heat input capacity of less than 200,000 Btu/hr which never burn refuse, or treated or chemically contaminated wood [35 IAC 201.210(a)(4)].
 - b. Storage tanks of organic liquids with a capacity of less than 10,000 gallons and an annual throughput of less than 100,000 gallons per year, provided the storage tank is not used for the storage of gasoline or any material listed as a HAP pursuant to Section 112(b) of the CAA [35 IAC 201.210(a)(10)].

3.1.4 Activities that are considered insignificant activities pursuant to 35 IAC 201.210(b). Note: These activities are not required to be individually listed.

3.2 Compliance with Applicable Requirements

Insignificant activities are subject to applicable requirements notwithstanding status as insignificant activities. In particular, in addition to regulations of general applicability, such as 35 IAC 212.301 and 212.123 (Condition 5.3.2), the Permittee shall comply with the following requirements, as applicable:

- 3.2.1 For each particulate matter process emission unit, the Permittee shall comply with the applicable particulate matter emission limit of 35 IAC 212.321 or 212.322 (see Attachment 2) and 35 IAC Part 266. For example, the particulate matter emissions from a process emission unit shall not exceed 0.55 pounds per hour if the emission unit's process weight rate is 100 pounds per hour or less, pursuant to 35 IAC 266.110.
- 3.2.2 For each organic material emission unit that uses organic material, e.g., a mixer or printing line, the Permittee shall comply with the applicable VOM emission limit of 35 IAC 218.301, which requires that organic material emissions not exceed 8.0 pounds per hour or, if no odor nuisance exists, do not qualify as photochemically reactive material as defined in 35 IAC 211.4690.
- 3.2.3 For each storage tank that has a storage capacity greater than 946 liters (250 gallons) and, if no odor nuisance exists, that stores an organic material with a vapor pressure exceeding 2.5 psia at 70°F, the Permittee shall comply with the applicable requirements of 35 IAC 218.122, which requires use of a permanent submerged loading pipe, submerged fill, or a vapor recovery system. Note that this requirement is less stringent than the requirements in Condition 5.3.8.

3.3 Addition of Insignificant Activities

- 3.3.1 The Permittee is not required to notify the Illinois EPA of additional insignificant activities present at the source of a type that is identified in Condition 3.1, until the renewal application for this permit is submitted, pursuant to 35 IAC 201.212(a).
- 3.3.2 The Permittee must notify the Illinois EPA of any proposed addition of a new insignificant activity of a type addressed by 35 IAC 201.210(a) and 201.211 other than those identified in Condition 3.1, pursuant to Section 39.5(12)(b) of the Act.
- 3.3.3 The Permittee is not required to notify the Illinois EPA of additional insignificant activities present at the source of a type identified in 35 IAC 201.210(b).

5.0 OVERALL SOURCE CONDITIONS

5.1 Applicability of Clean Air Act Permit Program

5.1.1 This permit is issued based on the source requiring a CAAPP permit as a major source of VOM emissions.

5.2 Area Designation

This source is located in an area that is in non-attainment of the National Ambient Air Quality Standards for ozone and $PM_{\rm 2.5}$ and attainment for all other pollutants.

5.3 General Applicable Provisions and Regulations

- 5.3.1 Specific emission units at this source are subject to particular regulations as set forth in Section 7 (Unit-Specific Conditions for Specific Emission Units) of this permit.
- 5.3.2 In addition, emission units at this source are subject to the following regulations of general applicability:
 - a. No person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally overhead at a point beyond the property line of the source unless the wind speed is greater than 40.2 kilometers per hour (25 miles per hour), pursuant to 35 IAC 212.301 and 212.314.
 - b. Pursuant to 35 IAC 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to the requirements of 35 IAC 212.122, except as allowed by 35 IAC 212.123(b) and 212.124.
 - c. Pursuant to 35 IAC 237.102, no person shall cause or allow open burning, except the Illinois EPA may grant permits for open burning in accordance with 35 IAC 237.201.

5.3.3 Fugitive Particulate Matter Operating Program

a. This source shall be operated under the provisions of an operating program prepared by the Permittee and submitted to the Illinois EPA for its review. Such operating program shall be designed to significantly reduce fugitive particulate matter emissions [35 IAC 212.309(a)]. The Permittee shall comply with the fugitive particulate matter operating program, submitted to the Illinois EPA and incorporated by reference into this permit, and any amendments to the program submitted pursuant to paragraph b below.

- b. The operating program shall be amended from time to time by the Permittee so that the operating program is current. Such amendments shall be consistent with the requirements set forth by this Condition and shall be submitted to the Illinois EPA [35 IAC 212.312].
- c. All normal traffic pattern roads and parking facilities located at this source shall be paved or treated with water, oils, or chemical dust suppressants. All paved areas shall be cleaned on a regular basis. All areas treated with water, oils, or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program [35 IAC 212.306].

5.3.4 Ozone Depleting Substances

The Permittee shall comply with the standards for recycling and emissions reduction of ozone depleting substances pursuant to 40 CFR Part 82, Subpart F, except as provided for motor vehicle air conditioners in Subpart B of 40 CFR Part 82:

- a. Persons opening appliances for maintenance, service, repair, or disposal must comply with the required practices pursuant to 40 CFR 82.156.
- b. Equipment used during the maintenance, service, repair, or disposal of appliances must comply with the standards for recycling and recovery equipment pursuant to 40 CFR 82.158.
- c. Persons performing maintenance, service, repair, or disposal of appliances must be certified by an approved technician certification program pursuant to 40 CFR 82.161.

5.3.5 Risk Management Plan (RMP)

Should this stationary source, as defined in 40 CFR 68.3, become subject to the federal regulations for Chemical Accident Prevention in 40 CFR Part 68, then the owner or operator shall submit the items below. This condition is imposed in this permit pursuant to 40 CFR 68.215(a)(2)(i) and (ii).

- a. A compliance schedule for meeting the requirements of 40 CFR Part 68 by the date provided in 40 CFR 68.10(a); or
- b. A certification statement that the source is in compliance with all requirements of 40 CFR Part 68, including the registration and submission of the RMP, as part of the annual compliance certification required by Condition 9.8.

5.3.6 Future Emission Standards

a. Should this stationary source become subject to a regulation under 40 CFR Parts 60, 61, 62, or 63, or 35 IAC Subtitle B after the date issued of this permit, then the

owner or operator shall, in accordance with the applicable regulation(s), comply with the applicable requirements by the date(s) specified and shall certify compliance with the applicable requirements of such regulation(s) as part of the annual compliance certification, as required by Condition 9.8. This permit may also have to be revised or reopened to address such new regulations (see Condition 9.12.2).

b. No later than upon the submittal for renewal of this permit, the owner or operator shall submit, as part of an application, the necessary information to address either the non-applicability of, or demonstrate compliance with all applicable regulations under 40 CFR Parts 60, 61, 62, or 63, or 35 IAC Subtitle B that were promulgated after the date issued of this permit.

5.3.7 Episode Action Plan

- a. Pursuant to 35 IAC 244.142, the Permittee shall maintain at the source and have on file with the Illinois EPA a written episode action plan (plan) for reducing the levels of emissions during yellow alerts, red alerts, and emergencies, consistent with safe operating procedures. The plan shall contain the information specified in 35 IAC 244.144.
- b. The Permittee shall immediately implement the appropriate steps described in this plan should an air pollution alert or emergency be declared.
- c. If an operational change occurs at the source which invalidates the plan, a revised plan shall be submitted to the Illinois EPA for review within 30 days of the change, pursuant to 35 IAC 244.143(d). Such plans shall be further revised if disapproved by the Illinois EPA.
- d. A copy of the original plan and any subsequent revisions shall also be sent to the Cook County Department of Environmental Control.

5.3.8 Storage Tank Requirements

a. The Permittee shall equip tanks storing VOL with a vapor pressure greater than 10 kPa (1.5 psi) at 20 °C (68 °F) with pressure/vacuum conservation vents set as a minimum at ±0.2 kPa (0.029 psi). These controls shall be operated at all times. An alternative air pollution control system may be used if it results in a greater emission reduction than these controls. Any alternative control system can be allowed only if approved by the Illinois and approved by the USEPA as a SIP revision [35 IAC 218.626(a)].

- b. Except as provided in Condition 5.4, stationary VOL storage containers with a capacity greater than 946 L (250 gal) shall be equipped with a submerged-fill pipe or bottom fill. These controls shall be operated at all times. An alternative control system can be allowed only if approved by the Illinois EPA and approved by the USEPA as a SIP revision [35 IAC 218.626(b)].
- c. As long as no odor nuisance exists at this source, the resin storage tanks identified in Adjusted Standard AS 99-4 are subject to the conditions of the Adjusted Standard, as summarized below:
 - i. The vapor pressures of materials stored in the 17 identified tanks (tanks no. 26, 27, 35, 36, 37, 42, 43, 44, 47, 48, 49, 53, 54, 55, 59, 60 and 67) shall remain less than 0.5 psia at 70 degrees Fahrenheit.
 - ii. Any existing or new storage tanks not explicitly listed within the Adjusted Standard shall remain subject to the control requirements of 35 IAC 218.626(b).

5.4 General Non-Applicability of Regulations of Concern

Any stationary VOL storage containers for which an adjusted standard has been granted by the Illinois Pollution Control Board shall not be required to meet the requirements of 35 IAC 218.626(b) (see Condition 5.3.8(b)), pursuant to the conditions of the adjusted standard (see Condition 5.3.8(c)).

5.5 General Source-Wide Control Requirements and Work Practices

In addition to the source-wide requirements in the Standard Permit Conditions in Section 9, the Permittee shall fulfill the following source-wide operational and production limitations and/or work practice requirements:

- 5.5.1 The Permittee shall, in accordance with the manufacturer(s) and/or vendors(s) recommendations, perform periodic maintenance on the pollution control equipment covered under this permit such that the pollution control equipment be kept in proper working condition and not cause a violation of the Act or regulations promulgated therein.
- 5.5.2 Monitoring Requirements for Leaks

The following work practice requirements shall apply to each emission unit subject to 35 IAC Part 218, Subpart AA, as further described in Section 7:

a. Each pump shall be checked by visual inspection each calendar week for indications of leaks, that is, liquids dripping from the pump seal. If there are indications of

liquids dripping from the pump seal, the pump shall be repaired as soon as practicable, but no later than 15 calendar days after the leak is detected [35 IAC 218.628(a)].

- b. Any pump, valve, pressure relief valve, sampling connection, open-ended valve and flange or connector containing a fluid which is at least 10 percent VOM by weight which appears to be leaking on the basis of sight, smell or sound shall be repaired as soon as practicable, but no later than 15 calendar days after the leak is detected [35 IAC 218.628(b)].
- c. A weather proof, readily visible tag, in bright colors such as red or yellow, bearing an identification number and the date on which the leak was detected shall be attached to leaking equipment. The tag may be removed upon repair, that is, when the equipment is adjusted or otherwise altered to allow operation without leaking [35 IAC 218.628(c)].

5.5.3 Clean Up Requirements

The following work practice requirements shall apply to each emission unit subject to 35 IAC Part 218, Subpart AA, as further described in Section 7:

- a. No person shall clean paint or ink manufacturing equipment with organic solvent unless the equipment being cleaned is completely covered or enclosed except for an opening no larger than necessary to allow safe clearance for proper operation of the cleaning equipment, considering the method and materials being used [35 IAC 218.630(a)].
- b. No person shall store organic wash solvent in other than closed containers, unless closed containers are demonstrated to be a safety hazard, or dispose of organic wash solvent in a manner such that more than 20 percent by weight is allowed to evaporate into the atmosphere [35 IAC 218.630(b)].

5.6 General Source-Wide Production and Emission Limitations

5.6.1 Permitted Emissions for Fees

The annual emissions from the source, not considering insignificant activities as addressed by Section 3.0 of this permit, shall not exceed the following limitations. The overall source emissions shall be determined by adding emissions from all emission units. Compliance with these limits shall be determined on a calendar year basis. These limitations (Condition 5.6.1) are set for the purpose of establishing fees and are not federally enforceable (see Section 39.5(18) of the Act).

Permitted Emissions of Regulated Pollutants

Pollutant	Tons/Year
Volatile Organic Material (VOM)	200.30
Sulfur Dioxide (SO ₂)	0.00
Particulate Matter (PM)	3.55
Nitrogen Oxides (NO _x)	0.00
HAP, not included in VOM or PM	
Total	203.85

5.6.2 Emissions of Hazardous Air Pollutants

The emissions of HAPs from the source shall be less than 10 tons/year for each individual HAP and 25 tons/year for all HAPs combined. Compliance with annual limits shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total). This condition is being imposed so that the source is not a major source of HAP emissions and the requirements of 40 CFR Part 63, Subparts FFFF and HHHHH, National Emission Standards for Miscellaneous Organic Chemical Production and Processes and Miscellaneous Coating Manufacturing, do not apply to the source. The Permittee shall fulfill the applicable testing, recordkeeping, and reporting requirements of Conditions 5.7.2, 5.9.3, and 5.10.2.

5.6.3 Other Source-Wide Emission Limitations

Other source-wide emission limitations are not set for this source pursuant to the federal rules for Prevention of Significant Deterioration (PSD), 40 CFR 52.21, state rules for Major Stationary Sources Construction and Modification, 35 IAC Part 203, or Section 502(b)(10) of the CAA. However, there may be unit specific emission limitations set forth in Section 7 of this permit pursuant to these rules.

5.7 General Testing Requirements

- 5.7.1 Pursuant to 35 IAC 201.282 and Section 4(b) of the Act, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:
 - a. Testing by Owner or Operator: The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. All such tests shall be made by or under the direction of a

person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests [35 IAC 201.282(a)].

- the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary [35 IAC 201.282(b)].
- c. Any such tests are also subject to the Testing Procedures of Condition 8.5 set forth in the General Permit Conditions of Section 8.

5.7.2 HAP Testing to Verify Minor Source Status

Pursuant to Condition 5.7.1 and to verify compliance with the requirements of Condition 5.6.2, that is that this source is not a major source of HAPs, the following testing requirements are established:

a. If in the previous calendar year, emissions of HAPs exceeded 80% of major source threshold for individual and total HAPs (less than 8 tons of a single HAP and less than 20 tons of total HAPs), then testing for HAPs using USEPA Method 311 shall be conducted as follows:

Test the material(s) that contribute to individual and total HAP emissions from the ball mills and cutters.

- b. Testing may be conducted by the supplier of the HAPcontaining material.
- c. The calculation as to whether the 80% of major source threshold was exceeded shall be based on records and procedures in Condition 5.9.3 and shall be completed by January 31 for the previous calendar year. If testing is required it shall be completed by March 15.
- d. Any such tests are also subject to the Testing Procedures of Condition 8.5 set forth in the General Permit Conditions of Section 8.

5.8 General Monitoring Requirements

General monitoring requirements are not set for this source. However, there may be provisions for unit specific monitoring set forth in Section 7 of this permit.

5.9 General Recordkeeping Requirements

5.9.1 Annual Emission Records

The Permittee shall maintain records of total annual emissions on a calendar year basis for the emission units covered by Section 7 (Unit Specific Conditions for Specific Emission Units) of this permit to demonstrate compliance with Condition 5.6.1, pursuant to Section 39.5(7)(b) of the Act.

5.9.2 Records for Source-Wide Control Requirements and Work Practices

- a. The Permittee shall keep records of the maintenance performed pursuant to Condition 5.5.1, including but not limited to the following:
 - i. The Permittee shall keep records of the maintenance performed pursuant to Condition 5.5.1, including but not limited to the following:
 - ii. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

b. Recordkeeping for Leaks

- i. When a leak is detected, the owner or operator shall record the date of detection and repair and the record shall be retained at the source for at least two years from the date of each detection or each repair attempt, or for such longer period as may be required by this permit. The record shall be made available to any person upon verbal or written request during business hours [35 IAC 218.628(d)].
- c. The Permittee shall maintain all records necessary to establish that the vapor pressures of the materials stored in the 17 identified tanks (see Condition 5.3.8(c)) are less than 0.5 psia at 70 degrees Fahrenheit. The records shall be maintained at the source for a period of no less than 3 years, or for such longer period as may be required by this permit (see Condition 5.9.4 and 9.6.3).

5.9.3 Records for HAP Emissions

a. The Permittee shall maintain records of individual and combined HAP emissions on a monthly and annual basis for the emission units covered by Section 7 (Unit Specific Conditions for Specific Emission Units) of this permit to demonstrate compliance with Condition 5.6.2, pursuant to Section 39.5(7)(b) of the Act.

- b. If testing is required by Condition 5.7.2, the Permittee shall keep records of the testing, including the test date, conditions, methodologies, calculations, test results, and any discrepancies between the test results and formulation specifications of Condition 5.9.3(c) below.
- c. The Permittee shall keep an MSDS or equivalent document showing the formulation of each coating, including content of all HAPs. These formulation sheets may be used to make the calculation of HAP emissions required by Condition 5.7.2. If the formulation sheet uses a maximum or range value (e.g., less than 1% or range of 2 3%) then the highest value shall be used.

5.9.4 Retention and Availability of Records

- a. All records and logs required by this permit shall be retained for at least five years from the date of entry (unless a longer retention period is specified by the particular recordkeeping provision herein), shall be kept at a location at the source that is readily accessible to the Illinois EPA or USEPA, and shall be made available for inspection and copying by the Illinois EPA or USEPA upon request.
- b. The Permittee shall retrieve and print, on paper during normal source office hours, any records retained in an electronic format (e.g., computer) in response to an Illinois EPA or USEPA request for records during the course of a source inspection.

5.10 General Reporting Requirements

5.10.1 General Source-Wide Reporting Requirements

The Permittee shall promptly notify the Illinois EPA, Air Compliance Unit, of deviations of the source with the permit requirements as follows, pursuant to Section 39.5(7)(f)(ii) of the Act. Reports shall describe the probable cause of such deviations, and any corrective actions or preventive measures taken. There are also reporting requirements for unit specific emission units set forth in Section 7 of this permit.

5.10.2 Annual Emissions Report

The annual emissions report required pursuant to Condition 9.7 shall contain emissions information, including HAP emissions, for the previous calendar year.

- 5.10.3 Other Source-Wide Reporting Requirements
 - a. Upon request by the Illinois EPA, for any emission unit(s) which the Permittee claims to be exempt from the requirements of 35 IAC 218, Subpart AA, the Permittee shall

submit records to the Illinois EPA within 30 calendar days from the date of the request which document that the emission unit(s) is in fact exempt from that Subpart. These records shall include (but are not limited to) the percent water (by weight) in the paint or ink being produced and the quantity of Magie oil, glycol, and other solvents in the ink being produced [35 IAC 218.637(a)].

5.11 General Operational Flexibility/Anticipated Operating Scenarios

Source-wide operational flexibility is not set for this source. However, there may be provisions for unit specific operational flexibility set forth in Section 7 of this permit.

5.12 General Compliance Procedures

5.12.1 General Procedures for Calculating Emissions

- a. Except as provided in Condition 9.1.3, compliance with the source-wide emission limits specified in Condition 5.6 shall be based on the recordkeeping and reporting requirements of Conditions 5.9 and 5.10, and compliance procedures in Section 7 (Unit Specific Conditions for Specific Emission Units) of this permit.
- b. For the purpose of estimating VOM emissions from the ink manufacturing processes, the following methods may be used:
 - i. For closed processes, a BATCH ACT modeling program
 (or equivalent), per USEPA's methodology outlined in
 "Control of Volatile Organic Compound Emissions From
 Batch Processes Alternative Control Techniques
 Information Document" (EPA 450/R-94-020);
 - ii. For open processes, emission factors that were developed from stack testing using TTE around typical operations. For this purpose, information from "National Association of Printing Ink Manufacturers Guide to Estimating VOC Emissions from Printing Ink Manufacturing" is acceptable.
 - iii. "Methods for Estimating Air Emissions from Paint, Ink, and Other Coating Manufacturing Facilities" (Emissions Inventory Improvement Program, Volume II, Chapter 8, February 2005).
- c. For the purpose of estimated VOM emissions from equipment leaks, the procedure in Protocol for Equipment Leak Emission Estimates (June 1993), EPA-453/R-93-026 is acceptable.

d. For the purpose of estimating HAP emissions from equipment at the source, the weight percent of each HAP for each finished product times the VOM emissions contributed by that product is acceptable.

5.12.2 Compliance Plan/Schedule of Compliance

To meet compliance with applicable limitations of Condition 5.3.8, the Permittee shall fulfill the following actions:

a. On October 22, 1998, Sun Chemical Corporation filed a petition for an Adjusted Standard, which was docketed as AS 99-4, and granted on May 20, 1999. The Adjusted Standard is for seventeen resin storage tanks used to store materials used in the production of printing inks. These storage tanks are regulated under 35 IAC Part 218, Subpart AA (see Condition 5.3.8 of this permit), and the Adjusted Standard seeks relief from these requirements. The Permittee shall meet all terms and conditions of the adjusted standard as granted by the Illinois Pollution Control Board.

6.0 CONDITIONS FOR EMISSIONS CONTROL PROGRAMS

6.1 Emissions Reduction Market System (ERMS)

6.1.1 Description of ERMS

The ERMS is a "cap and trade" market system for major stationary sources located in the Chicago ozone nonattainment area. It is designed to reduce VOM emissions from stationary sources to contribute to reasonable further progress toward attainment, as required by Section 182(c) of the CAA.

The ERMS addresses VOM emissions during a seasonal allotment period from May 1 through September 30. Participating sources must hold "allotment trading units" (ATUs) for their actual seasonal VOM emissions. Each year participating sources are issued ATUs based on allotments set in the sources' CAAPP permits. These allotments are established from historical VOM emissions or "baseline emissions" lowered to provide the emissions reductions from stationary sources required for reasonable further progress.

By December 31 of each year, the end of the reconciliation period following the seasonal allotment period, each source shall have sufficient ATUs in its transaction account to cover its actual VOM emissions during the preceding season. A transaction account's balance as of December 31 will include any valid ATU transfer agreements entered into as of December 31 of the given year, provided such agreements are promptly submitted to the Illinois EPA for entry into the transaction account database. The Illinois EPA will then retire ATUs in sources' transaction accounts in amounts equivalent to their seasonal emissions. When a source does not appear to have sufficient ATUs in its transaction account, the Illinois EPA will issue a notice to the source to begin the process for Emissions Excursion Compensation.

In addition to receiving ATUs pursuant to their allotments, participating sources may also obtain ATUs from the market, including ATUs bought from other participating sources and general participants in the ERMS that hold ATUs (35 IAC 205.630) and ATUs issued by the Illinois EPA as a consequence of VOM emissions reductions from an Emissions Reduction Generator or an Intersector Transaction (35 IAC 205.500 and 35 IAC 205.510). During the reconciliation period, sources may also buy ATUs from a secondary reserve of ATUs managed by the Illinois EPA, the "Alternative Compliance Market Account" (ACMA) (35 IAC 205.710). Sources may also transfer or sell the ATUs that they hold to other sources or participants (35 IAC 205.630).

6.1.2 Applicability

This source is considered a "participating source" for purposes of the ERMS, 35 IAC Part 205.

- 6.1.3 Obligation to Hold Allotment Trading Units (ATUs)
 - a. Pursuant to 35 IAC 205.150(c)(1) and 35 IAC 205.720, and as further addressed by Condition 6.1.8, as of December 31 of each year, this source shall hold ATUs in its account in an amount not less than the ATU equivalent of its VOM emissions during the preceding seasonal allotment period (May 1 September 30), not including VOM emissions from the following, or the source shall be subject to "emissions excursion compensation," as described in Condition 6.1.5.
 - i. VOM emissions from insignificant emission units and activities as identified in Section 3 of this permit, in accordance with 35 IAC 205.220;
 - ii. Excess VOM emissions associated with startup, malfunction, or breakdown of an emission unit as authorized in Section 7.0 of this permit, in accordance with 35 IAC 205.225;
 - iii. Excess VOM emissions to the extent allowed by a Variance, Consent Order, or Compliance Schedule, in accordance with 35 IAC 205.320(e)(3);
 - iv. Excess VOM emissions that are a consequence of an emergency as approved by the Illinois EPA, pursuant to 35 IAC 205.750; and
 - v. VOM emissions from certain new and modified emission units as addressed by Condition 6.1.8(b), if applicable, in accordance with 35 IAC 205.320(f).
 - b. Notwithstanding the above condition, in accordance with 35 IAC 205.150(c)(2), if a source commences operation of a major modification, pursuant to 35 IAC Part 203, the source shall hold ATUs in an amount not less than 1.3 times its seasonal VOM emissions attributable to such major modification during the seasonal allotment period, determined in accordance with the construction permit for such major modification or applicable provisions in Section 7.0 of this permit.

6.1.4 Market Transactions

- a. The source shall apply to the Illinois EPA for and obtain authorization for a Transaction Account prior to conducting any market transactions, as specified at 35 IAC 205.610(a).
- b. The Permittee shall promptly submit to the Illinois EPA any revisions to the information submitted for its Transaction Account, pursuant to 35 IAC 205.610(b).

- c. The source shall have at least one account officer designated for its Transaction Account, pursuant to 35 IAC 205.620(a).
- d. Any transfer of ATUs to or from the source from another source or general participant must be authorized by a qualified Account Officer designated by the source and approved by the Illinois EPA, in accordance with 35 IAC 205.620, and the transfer must be submitted to the Illinois EPA for entry into the Transaction Account database.

6.1.5 Emissions Excursion Compensation

Pursuant to 35 IAC 205.720, if the source fails to hold ATUs in accordance with Condition 6.1.3, it shall provide emissions excursion compensation in accordance with the following:

- a. Upon receipt of an Excursion Compensation Notice issued by the Illinois EPA, the source shall purchase ATUs from the ACMA in the amount specified by the notice, as follows:
 - i. The purchase of ATUs shall be in an amount equivalent to 1.2 times the emissions excursion; or
 - ii. If the source had an emissions excursion for the seasonal allotment period immediately before the period for the present emissions excursion, the source shall purchase ATUs in an amount equivalent to 1.5 times the emissions excursion.
- b. If requested in accordance with paragraph (c) below or in the event that the ACMA balance is not adequate to cover the total emissions excursion amount, the Illinois EPA will deduct ATUs equivalent to the specified amount or any remaining portion thereof from the ATUs to be issued to the source for the next seasonal allotment period.
- c. Pursuant to 35 IAC 205.720(c), within 15 days after receipt of an Excursion Compensation Notice, the owner or operator may request that ATUs equivalent to the amount specified be deducted from the source's next seasonal allotment by the Illinois EPA, rather than purchased from the ACMA.

6.1.6 Quantification of Seasonal VOM Emissions

a. The methods and procedures specified in Sections 5 and 7 of this permit for determining VOM emissions and compliance with VOM emission limitations shall be used for determining seasonal VOM emissions for purposes of the ERMS, with the following exceptions [35 IAC 205.315(b)]:

No exceptions

- b. The Permittee shall report emergency conditions at the source to the Illinois EPA, in accordance with 35 IAC 205.750, if the Permittee intends to deduct VOM emissions in excess of the technology-based emission rates normally achieved that are attributable to the emergency from the source's seasonal VOM emissions for purposes of the ERMS. These reports shall include the information specified by 35 IAC 205.750(a), and shall be submitted in accordance with the following:
 - i. An initial emergency conditions report within two days after the time when such excess emissions occurred due to the emergency; and
 - ii. A final emergency conditions report, if needed to supplement the initial report, within 10 days after the conclusion of the emergency.

6.1.7 Annual Account Reporting

- a. For each year in which the source is operational, the Permittee shall submit, as a component of its Annual Emissions Report, seasonal VOM emissions information to the Illinois EPA for the seasonal allotment period. This report shall include the following information [35 IAC 205.300]:
 - i. Actual seasonal emissions of VOM from the source;
 - ii. A description of the methods and practices used to determine VOM emissions, as required by this permit, including any supporting documentation and calculations;
 - iii. A detailed description of any monitoring methods that differ from the methods specified in this permit, as provided in 35 IAC 205.337;
 - iv. If a source has experienced an emergency, as provided in 35 IAC 205.750, the report shall reference the associated emergency conditions report that has been approved by the Illinois EPA;
 - v. If a source's baseline emissions have been adjusted due to a Variance, Consent Order, or CAAPP permit Compliance Schedule, as provided for in 35 IAC 205.320(e)(3), the report shall provide documentation quantifying the excess VOM emissions during the season that were allowed by the Variance, Consent Order, or Compliance Schedule, in accordance with 35 IAC 205.320(e)(3); and
 - vi. If a source is operating a new or modified emission unit for which three years of operational data is not

yet available, as specified in 35 IAC 205.320(f), the report shall specify seasonal VOM emissions attributable to the new emission unit or the modification of the emission unit.

b. This report shall be submitted by November 30 of each year, for the preceding seasonal allotment period.

6.1.8 Allotment of ATUs to the Source

- a. i. The allotment of ATUs to this source is 320 ATUs per seasonal allotment period.
 - ii. This allotment of ATUs reflects the Illinois EPA's determination that the source's baseline emissions were 36.296 tons per season.
 - A. This determination includes the use of 1994 and 1996 as baseline seasons.
 - B. This determination also includes adjustment to actual emissions to account for voluntary overcompliance at the source, e.g., VOM emissions from bulk grinding mills, cutters, varnish cooking kettles, and UV coating mixers that were lower than required, pursuant to 35 IAC 205.320(d), as further addressed in Section 7 of this permit.
 - iii. The source's allotment reflects 88% of the baseline emissions (12% reduction), except for the VOM emissions from specific emission units excluded from such reduction, pursuant to 35 IAC 205.405, including units complying with MACT or using BAT, as identified in Condition 6.1.10 of this permit.
 - iv. ATUs will be issued to the source's Transaction Account by the Illinois EPA annually. These ATUs will be valid for the seasonal allotment period following issuance and, if not retired in this season, the next seasonal allotment period.
 - v. Condition 6.1.3(a) becomes effective beginning in the seasonal allotment period following the initial issuance of ATUs by the Illinois EPA into the Transaction Account for the source.
- b. Contingent Allotments for New or Modified Emission Units

None

c. Notwithstanding the above, part or all of the above ATUs will not be issued to the source in circumstances as set forth in 35 IAC Part 205, including:

- i. Transfer of ATUs by the source to another participant or the ACMA, in accordance with 35 IAC 205.630;
- ii. Deduction of ATUs as a consequence of emissions excursion compensation, in accordance with 35 IAC 205.720; and
- iii. Transfer of ATUs to the ACMA, as a consequence of shutdown of the source, in accordance with 35 IAC 205.410.

6.1.9 Recordkeeping for ERMS

The Permittee shall maintain copies of the following documents as its Compliance Master File for purposes of the ERMS [35 IAC 205.700(a)]:

- a. Seasonal component of the Annual Emissions Report;
- b. Information on actual VOM emissions, as specified in detail in Sections 5 and 7 of this permit and Condition 6.1.6(a); and
- c. Any transfer agreements for the purchase or sale of ATUs and other documentation associated with the transfer of ATUs.

6.1.10 Exclusions from Further Reductions

- a. VOM emissions from the following emission units shall be excluded from the VOM emissions reductions requirements specified in 35 IAC 205.400(c) and (e) as long as such emission units continue to satisfy the following [35 IAC 205.405(a)]:
 - i. Emission units that comply with any NESHAP or MACT standard promulgated pursuant to the CAA;
 - ii. Direct combustion emission units designed and used for comfort heating purposes, fuel combustion emission units, and internal combustion engines; and
 - iii. An emission unit for which a LAER demonstration has been approved by the Illinois EPA on or after November 15, 1990.

The source has demonstrated in its ERMS application and the Illinois EPA has determined that the following emission units qualify for exclusion from further reductions because they meet the criteria as indicated above [35 IAC 205.405(a) and (c)]:

None

b. VOM emissions from emission units using BAT for controlling VOM emissions shall not be subject to the VOM emissions reductions requirement specified in 35 IAC 205.400(c) or (e) as long as such emission unit continues to use such BAT [35 IAC 205.405(b)].

The source has demonstrated in its ERMS application and the Illinois EPA has determined that the following emission units qualify for exclusion from further reductions because these emission units use BAT for controlling VOM emissions as indicated above [35 IAC 205.405(b) and (c)]:

None

7.0 UNIT SPECIFIC CONDITIONS FOR SPECIFIC EMISSION UNITS

7.1 Emission Units 01-02: Ball Mills Control: Dust Collectors

7.1.1 Description

Ball Mills are a batch operation producing base or finished ink. In the Ball Mill Department, solvent, varnish, and pigment are added to a cylindrical vessel loaded with grinding media. The mill is then sealed and operated for approximately 24 hours. Following grinding, the finished product is packaged or transferred to bulk storage tanks. PM is emitted when powdered pigment is added to the mill and is controlled by a bag filter. VOM is emitted during vessel charging and packaging the ink.

7.1.2 List of Emission Units and Air Pollution Control Equipment

Emission		Date	Emission Control
Unit	Description	Constructed	Equipment
01	3 Ball Mills (MBM20-21 and MBM33)	Prior to 1972 (MBM33: 2002)	Dust Collector #2 (DC02)
02	6 Ball Mills (MBM 22-23, 25-26, 31-32)	Prior to 1972	Dust Collector #3 (DC03)

7.1.3 Applicable Provisions and Regulations

- a. i. The "affected ball mills" for the purpose of these unit specific conditions, are Ball Mills MBM20 through 33 (Emission Units 01-02) which produce ink or base through grinding of raw materials.
 - ii. The affected ball mills are subject to the emission limits identified in Condition 5.3.2.
- b. The affected ball mills are subject to 35 IAC 218, Subpart AA: Paint and Ink Manufacturing, because the source has the potential to emit 22.7 Mg (25 tons) or more of VOM per year, in aggregate. These requirements are described in Conditions 5.5 and 7.1.5(a) and (b).
- c. The affected ball mills are subject to 35 IAC 218.301, which provides that no person shall cause or allow the discharge of more than 3.6 kg/hr (8 lb/hr) of organic material into the atmosphere from any emission unit, except as provided in 35 IAC 218.302 and with the following exception: if no odor nuisance exists the limitation shall apply only to photochemically reactive material.
- d. The affected ball mills (except MBM33) are subject to 35 IAC 212.322, which provides that:

No person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any existing process emission unit, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced prior to April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in subsection (c) of 35 IAC 212.322 (See also Attachment 2) [35 IAC 212.322(a)].

e. The affected ball mill MBM33 is subject to 35 IAC 212.321, which provides that:

No person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in subsection (c) of 35 IAC 212.321 (See also Attachment 2) [35 IAC 212.321(a)].

f. Malfunction and Breakdown Provisions

The Permittee is authorized to continue operation of an affected ball mill in violation of the applicable standards in Condition 7.1.3(d) in the event of a malfunction or breakdown of a dust collector, subject to the following provisions. This authorization is provided pursuant to 35 IAC 201.262 as the Permittee has submitted proof that continued operation is required to provide essential service, prevent risk of injury to personnel or severe damage to equipment. This authorization supersedes the general prohibition in Condition 9.2.3 against continued operation in such circumstances:

- i. This authorization only allows such continued operation as necessary to provide essential service or prevent risk of injury to personnel or severe damage to equipment and does not extend to continued operation solely for the economic benefit of the Permittee. As provided by 35 IAC 201.265, this authorization does not shield the Permittee from enforcement for any such violation and shall only constitute a prima facie defense to such an enforcement action provided that the Permittee has fully complied with all associated terms and conditions.
- ii. Upon occurrence of excess emissions due to malfunction or breakdown, the Permittee shall as soon as practical reduce operation, repair, or remove the affected ball mill from service so that excess emissions cease. Unless the Permittee obtains an extension from the Illinois EPA, this shall be

accomplished within 7 days*. The Permittee may obtain an extension for up to a total of 7 days* from the Illinois EPA, Air Regional Office. The Illinois EPA, Air Compliance Section, in Springfield, may grant a longer extension if the Permittee demonstrates that extraordinary circumstances exist and the affected ball mill can not reasonably be repaired or removed from service within the allowed time.

- For this purpose and other related provisions, time shall be measured from the start of a particular incident. The absence of excess emissions for a short period shall not be considered to end the incident if excess emissions resume. In such circumstances, the incident shall be considered to continue until corrective actions are taken so that excess emissions cease or the Permittee takes the affected ball mill out of service.
- iii. A. The Permittee shall fulfill the applicable recordkeeping and reporting requirements of Conditions 7.1.9(e) and 7.1.10(b).
 - B. Following notification to the Illinois EPA of a malfunction or breakdown with excess emissions, the Permittee shall comply with all reasonable directives of the Illinois EPA with respect to such incident, pursuant to 35 IAC 201.263.

7.1.4 Non-Applicability of Regulations of Concern

- a. The affected ball mills are not subject to 35 IAC 218, Subpart TT, because the requirements of 35 IAC 218, Subpart TT do not apply to a source's VOM emission units which are included within any of the categories specified in 35 IAC 218, Subpart AA [35 IAC 218.980(a)].
- b. The affected ball mill MBM33 is not subject to 35 IAC Part 203, Major Stationary Sources Construction and Modification (MSSCAM), because the VOM emissions increase from the construction of ball mill MBM33, including contemporaneous increases and decreases, was less than 25 tons per year (see Attachment 6).

7.1.5 Control Requirements and Work Practices

The Permittee shall comply with the following requirements, in addition to the source wide requirements in Condition 5.5:

a. Open-top mills, tanks, vats or vessels:

- i. The mill, tank, vat or vessel is equipped with a cover which completely covers the mill, tank, vat or vessel opening except for an opening no larger than necessary to allow for safe clearance for a mixer shaft. Such cover shall extend at least 1.27 cm (0.5 in) beyond the outer rim of the opening or be attached to the rim [35 IAC 218.624(a)].
- ii. The cover remains closed except when production, sampling, maintenance or inspection procedures require access [35 IAC 218.624(b)].
- iii. The cover is maintained in good condition such that, when in place, it maintains contact with the rim of the opening for at least 90 percent of the circumference of the rim [35 IAC 218.624(c)].

b. Grinding mills:

- i. No person shall operate a grinding mill for the production of paint or ink which is not maintained in accordance with the manufacturer's specifications [35 IAC 218.625(a)].
- ii. No person shall operate a grinding mill fabricated or modified after the effective date of this Subpart which is not equipped with fully enclosed screens [35 IAC 218.625(b)].
- c. The Permittee shall follow good operating practice for the dust collectors, including periodic inspection, routine maintenance and prompt repair of defects. This requirement was established in Permit 01070053.

7.1.6 Production and Emission Limitations

In addition to Condition 5.3.2 and the source-wide emission limitations in Condition 5.6, the affected ball mills are subject to the following:

- a. VOM emissions from ball mill MBM33 shall not exceed 0.59 lb/hr and 2.57 tons/year. The above limitations were established in Permit 01070053, pursuant to 35 IAC Part 203. These limits ensure that the construction and/or modification addressed in the aforementioned permit does not constitute a new major source or major modification pursuant to Title I of the CAA, specifically 35 IAC Part 203 [T1].
- b. PM emission from ball mill MBM33 controlled by the dust collector, which also controls other ball mills and grinding premixers is negligible and shall not exceed 0.44 tons/year. This limit is based on 80% capture efficiency

and 99.9% control efficiency. This limitation was established in Permit 01070053.

c. Compliance with these annual limits shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

7.1.7 <u>Testing Requirements</u>

a. Upon request of the Illinois EPA or USEPA, the VOM emissions from an affected ball mill shall be determined in accordance with Reference Method 18, 25 or 25A, specified in 40 CFR 60 Appendix A, pursuant to 35 IAC 218.105. Use of an adaptation of these test methods may not be used unless approved by the Illinois EPA and the USEPA on a case by case basis. The Permittee must submit sufficient documentation for the Illinois EPA and the USEPA to find that the test methods specified above will yield inaccurate results or are otherwise inappropriate and that the proposed adaptation is appropriate [35 IAC 218.105(f)].

7.1.8 Monitoring Requirements

- a. The Permittee shall follow the source wide monitoring requirements in Condition 5.5.2 that include this unit.
- b. On at least a weekly basis, the Permittee shall monitor and record the pressure drop across the dust collector to ensure proper operation (e.g., for indications of deterioration), pursuant to Section 39.5(7)(b) and (d) of the Act.

7.1.9 Recordkeeping Requirements

In addition to the records required by Condition 5.9, the Permittee shall maintain records of the following items for each affected ball mill to demonstrate compliance with Conditions 5.6.1 and 7.1.3 through 7.1.8, pursuant to Section 39.5(7) (b) of the Act:

- a. For each affected ball mill, the Permittee shall maintain all records necessary to demonstrate compliance with 35 IAC 218, Subpart AA at the source for a period of three years [35 IAC 218.637(b)], or for such longer period as may be required by this permit (see Conditions 5.9.4 and 9.6.3).
- b. The manufacturer's specifications shall be kept on file at the plant by the owner or operator of the grinding mill and be made available to any person upon verbal or written request during business hours [35 IAC 218.625(c)].
- c. Monthly and annual records of the following items for all affected ball mills as a group:

- i. Amount of ink and base production (ton/mo and ton/yr);
- ii. VOM and pigment content for the ink and base production (weight percent);
- iii. Total VOM and PM emissions calculated based on the compliance procedures in Condition 7.1.12; and
- iv. Calculations of maximum hourly VOM emissions, based on the compliance procedures in Condition 7.1.12.
- d. Maintenance log for the dust collector, including pressure drop measurements required by Condition 7.1.8.
- e. Records for Malfunctions and Breakdowns

The Permittee shall maintain records, pursuant to 35 IAC 201.263, of continued operation of an affected ball mill subject to Condition 7.1.3(f) during malfunctions and breakdown, which as a minimum, shall include:

- i. Date and duration of malfunction or breakdown.
- ii. A detailed explanation of the malfunction or breakdown.
- iii. An explanation why the affected ball mill continued to operate in accordance with Condition 7.1.3(f).
- iv. The measures used to reduce the quantity of emissions and the duration of the event.
- v. The steps taken to prevent similar malfunctions or breakdowns or reduce their frequency and severity.
- vi. The amount of release above typical emissions during malfunction/breakdown.

7.1.10 Reporting Requirements

- a. The Permittee shall promptly notify the Illinois EPA, Air Compliance Unit, of deviations of an affected ball mill with the permit requirements as follows, pursuant to Section 39.5(7)(f)(ii) of the Act. Reports shall describe the probable cause of such deviations, and any corrective actions or preventive measures taken:
 - i. Any deviation from the applicable permit requirements of Section 7.1, including emission limits in Condition 7.1.6, shall be reported to the Illinois EPA within 30 days of such occurrence. The report shall include the identity of the requirements for

which a deviation occurred, a description of the deviation, its probable cause, and any corrective actions or preventive measures taken [39.5(7)(f)(ii) of the Act].

- ii. Any violation of the requirements of 35 IAC 218
 Subpart AA shall be reported by sending a copy of any
 record showing a violation to the Illinois EPA,
 Compliance Section, within 30 days following the
 occurrence of the violation.
- b. Reporting of Malfunctions and Breakdowns

The Permittee shall provide the following notification and reports to the Illinois EPA, Air Compliance Unit and Regional Field Office, pursuant to 35 IAC 201.263, concerning continued operation of an affected ball mill subject to Condition 7.1.3(f) during malfunction or breakdown:

- i. The Permittee shall notify the Illinois EPA's regional office by telephone as soon as possible during normal working hours, but no later than three (3) days, upon the occurrence of noncompliance due to malfunction or breakdown.
- ii. Upon achievement of compliance, the Permittee shall give a written follow-up notice to the Illinois EPA, Air Compliance Unit and Regional Field Office, providing a detailed explanation of the event, an explanation why continued operation of the affected ball mill was necessary, the length of time during which operation continued under such conditions, the measures taken by the Permittee to minimize and correct deficiencies with chronology, and when the repairs were completed or when the affected ball mill was taken out of service.
- iii. If compliance is not achieved within 5 working days of the occurrence, the Permittee shall submit interim status reports to the Illinois EPA, Air Compliance Unit and Regional Field Office, within 5 days of the occurrence and every 14 days thereafter, until compliance is achieved. These interim reports shall provide a brief explanation of the nature of the malfunction or breakdown, corrective actions accomplished to date, actions anticipated to occur with schedule, and the expected date on which repairs will be complete or the affected ball mill will be taken out of service.

7.1.11 Operational Flexibility/Anticipated Operating Scenarios

The Permittee is authorized to make the following physical or operational change with respect to an affected ball mill without prior notification to the Illinois EPA or revision of this permit. This condition does not affect the Permittee's obligation to properly obtain a construction permit in a timely manner for any activity constituting construction or modification of the source, as defined in 35 IAC 201.102:

- a. Changes in raw materials and ink formulations, as long as such changes do not cause a violation of the emission limitations in Condition 7.1.6 and Condition 5.6.1.
- b. Replacement of emission unit components in kind, provided that the replacement does not increase the amount of any specified air contaminant emitted by such equipment and does not result in the emission of any specified air contaminant not previously emitted.

7.1.12 Compliance Procedures

- a. Compliance with the PM emission limitations in this section is addressed by the proper operation, maintenance, and work-practices inherent in operation of each affected ball mill and associated control equipment, as required by Condition 7.1.5(c).
- b. Compliance with emission limitations in this section and Condition 5.6.1 is addressed by the recordkeeping requirements in Condition 7.1.9 and by use of the formulae and emission factors listed in Attachment 5 or by use of emission factors derived from a site specific emission factor if that emission factor was developed from stack test data and based on the worst case scenario. Site specific VOM emission factors other than those listed in Attachment 5 shall be approved by the Illinois EPA, and the ERMS baseline shall be revised to reflect any new methods, pursuant to 35 IAC 205.337. (Note that emission factors in Attachment 5 were determined using procedures in Condition 5.12.1.)
 - i. Total VOM emissions from each affected ball mill = the sum of VOM emissions from process operations, process equipment leaks, solvent cleaning, tanker loading, and filter openings.
 - ii. VOM emissions from process operations (including solvent cleaning) and filter openings:

VOM emissions = Production or Solvent Use (lb) x VOM Content (%VOM) x Emission Factor (lb/lb VOM).

iii. VOM emissions from process equipment leaks:

VOM emissions = Charging Hours (hr) x Emission Rate (lb/hr).

iv. VOM emissions from tanker loading:

VOM emissions = Number of Loads x Emission Factor (1b/load).

v. PM emissions from pigment mixing:

PM emissions = Production (lb) x Pigment Content (%)
x 0.001 lb/lb pigment x [1 - (Capture Efficiency, %)
x (Control Efficiency, %)]

Where 0.001 lb/lb pigment is the emission factor for pigment mixing, Table 6.7-1, AP-42, and the capture and control efficiencies are based on engineering estimates or manufacturer's recommendations.

c. Compliance of the affected ball mills with the emission limitation in Condition 7.1.3(c) is addressed by the workpractices inherent in the operation of the affected ball mills and the recordkeeping requirements in Condition 7.1.9(d). 7.2 Emission Units 03-07 and 22: Regular Grinding Control: Dust Collector

7.2.1 Description

Regular Grinding is a batch operation that produces either a base or a finished ink. During regular grinding, the solvent, varnish, and pigment are combined in a mixing vessel. Following premixing, the base is air mixed and pumped through a horizontal mill for grinding. The base is then transferred to a mixing vessel and processed at another mixer where it is adjusted to final specifications. Finally, the finished ink is passed through a filter and transferred to packaging for shipment. PM is emitted when pigment is added at the pre-mixer and is controlled by a bag filter. VOM is emitted during vessel charging, mixing, and packaging the ink.

7.2.2 List of Emission Units and Air Pollution Control Equipment

Emission		Date	Emission Control
Unit	Description	Constructed	Equipment
03	2 Premixers (MPM1-2), 2 Mixers (PM5-6), and Basket Mill Premixer	Prior to 1972 (Basket Mill Premixer: 2000, PM5-6: 2002)	Dust Collector #2 (DC02)
04	6 Air Mixers (MAM1-6)	Prior to 1972	None
05	2 Horizontal Mills (MHM5-6)	Prior to 1972	None
06	6 Tubs (MT1-6)	Prior to 1972	None
07	3 Let Down Mixers (MLD1-3)	Prior to 1972	None
22	4 Vertical Shot Mills (VM1-4)	2002	None

7.2.3 Applicable Provisions and Regulations

- a. i. An "affected regular grinding line" for the purpose of these unit specific conditions, is a line which applies mixing and grinding during ink or base manufacturing. This includes Premixers MPM 1-2, Mixers PM 5-6, Basket Mill Premixer, Air Mixers MAM1-6, Horizontal Mills MHM1-6, Tubs MT1-6, Let Down Mixers MLD1-3, and Vertical Shot Mills VM 1-4 (Emission Units 03-07 and 22). The "affected basket mill premixer" for the purpose of these unit specific conditions, is a premixer constructed in 2000 which uses equal or less mechanical effort than the preceding premixers.
 - ii. The affected regular grinding lines are subject to the emission limits identified in Condition 5.3.2.

- b. The affected regular grinding lines are subject to 35 IAC 218, Subpart AA: Paint and Ink Manufacturing, because the source has the potential to emit 22.7 Mg (25 tons) or more of VOM per year, in aggregate. These requirements are described in Conditions 5.5 and 7.2.5(a) and (b).
- c. The affected regular grinding lines are subject to 35 IAC Section 218.301, which provides that no person shall cause or allow the discharge of more than 3.6 kg/hr (8 lb/hr) of organic material into the atmosphere from any emission unit, except as provided in 35 IAC 218.302 and with the following exception: if no odor nuisance exists the limitation shall apply only to photochemically reactive material.
- d. The affected regular grinding lines (except emission units listed in 7.2.3(e) below) are subject to 35 IAC 212.322, which provides that:

No person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any process emission unit for which construction or modification commenced prior to April 14, 1972, which, either alone or in combination with the emission of particulate matter from all other similar process emission units, at a source or premises, exceeds the allowable emission rates specified in subsection (c) of 35 IAC 212.322 (See also Attachment 2) [35 IAC 212.322(a)].

e. The affected basket mill premixer, Premixers 5-6, and Vertical Shot Mills 1-4 are subject to 35 IAC 212.321, which provides that:

No person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in subsection (c) of 35 IAC 212.321 (See also Attachment 2) [35 IAC 212.321(a)].

f. Malfunction and Breakdown Provisions

The Permittee is authorized to continue operation of an affected regular grinding line in violation of the applicable standards in Conditions 7.2.3(d) or (e) or 7.2.5(a) in the event of a malfunction or breakdown of a dust collector or vessel cover, subject to the following provisions. This authorization is provided pursuant to 35 IAC 201.262 as the Permittee has submitted proof that continued operation is required to provide essential service, prevent risk of injury to personnel or severe

damage to equipment. This authorization supersedes the general prohibition in Condition 9.2.3 against continued operation in such circumstances:

- i. This authorization only allows such continued operation as necessary to provide essential service or prevent risk of injury to personnel or severe damage to equipment and does not extend to continued operation solely for the economic benefit of the Permittee. As provided by 35 IAC 201.265, this authorization does not shield the Permittee from enforcement for any such violation and shall only constitute a prima facie defense to such an enforcement action provided that the Permittee has fully complied with all associated terms and conditions.
- ii. Upon occurrence of excess emissions due to malfunction or breakdown, the Permittee shall as soon as practical reduce operation, repair, or remove the affected regular grinding line from service so that excess emissions cease. Unless the Permittee obtains an extension from the Illinois EPA, this shall be accomplished within 7 days*. The Permittee may obtain an extension for up to a total of 7 days* from the Illinois EPA, Air Regional Office. The Illinois EPA, Air Compliance Section, in Springfield, may grant a longer extension if the Permittee demonstrates that extraordinary circumstances exist and the affected regular grinding line can not reasonably be repaired or removed from service within the allowed time.
 - * For this purpose and other related provisions, time shall be measured from the start of a particular incident. The absence of excess emissions for a short period shall not be considered to end the incident if excess emissions resume. In such circumstances, the incident shall be considered to continue until corrective actions are taken so that excess emissions cease or the Permittee takes the affected regular grinding line out of service.
- iii. A. The Permittee shall fulfill the applicable recordkeeping and reporting requirements of Conditions 7.2.9(e) and 7.2.10(b).
 - B. Following notification to the Illinois EPA of a malfunction or breakdown with excess emissions, the Permittee shall comply with all reasonable directives of the Illinois EPA with respect to such incident, pursuant to 35 IAC 201.263.

7.2.4 Non-Applicability of Regulations of Concern

- a. The affected regular grinding lines are not subject to 35 IAC 218, Subpart TT, because the requirements of 35 IAC 218, Subpart TT do not apply to a source's VOM emission units which are included within any of the categories specified in 35 IAC 218, Subpart AA [35 IAC 218.980(a)].
- b. This permit is issued based on the affected basket mill premixer not being a major modification under state rules for Major Stationary Sources Construction and Modification (MSSCAM), 35 IAC Part 203. This is because the emissions of the affected basket mill premixer are limited to no more than 6.18 tons/year by this permit. In addition, as explained in the application for Permit 00050090, the affected basket mill premixer does not increase the throughput of the Regular Grinding department, which is limited by the capability of subsequent processing equipment. If other equipment is proposed to be replaced in or added to the Regular Grinding department in the future, the Permittee will have to demonstrate whether the department would be modified, and obtain an appropriate construction permit for such activity, in accordance with 35 IAC 201.142.
- c. The affected regular grinding lines are not subject to 35 IAC Part 203, Major Stationary Sources Construction and Modification (MSSCAM), because the net VOM emissions increase from the construction of Mixers 5-6 and Vertical Shot Mills 1-4, including contemporaneous increases and decreases, was less than 25 tons per year (see Attachment 6).

7.2.5 Control Requirements and Work Practices

The Permittee shall comply with the following requirements, in addition to the source wide requirements in Condition 5.5:

- a. Open-top mills, tanks, vats or vessels:
 - The mill, tank, vat or vessel is equipped with a cover which completely covers the mill, tank, vat or vessel opening except for an opening no larger than necessary to allow for safe clearance for a mixer shaft. Such cover shall extend at least 1.27 cm (0.5 in) beyond the outer rim of the opening or be attached to the rim [35 IAC 218.624(a)].
 - ii. The cover remains closed except when production, sampling, maintenance or inspection procedures require access [35 IAC 218.624(b)].
 - iii. The cover is maintained in good condition such that, when in place, it maintains contact with the rim of

the opening for at least 90 percent of the circumference of the rim [35 IAC 218.624(c)].

b. Grinding mills:

- i. No person shall operate a grinding mill for the production of paint or ink which is not maintained in accordance with the manufacturer's specifications [35 IAC 218.625(a)].
- ii. No person shall operate a grinding mill fabricated or modified after the effective date of this Subpart which is not equipped with fully enclosed screens [35 IAC 218.625(b)].

7.2.6 Production and Emission Limitations

In addition to Condition 5.3.2 and the source-wide emission limitations in Condition 5.6, the affected regular grinding lines are subject to the following:

a. Emissions from the affected basket mill premixer shall not exceed the following limits:

	Pollutant	Emissions
Pollutant	(Ton/Month)	(Ton/Year)
MOV	0.77	6.18
PM	0.01	0.09

These limits are based on the maximum operating rates, emission factors, dust collector efficiency, and maximum emissions from the affected basket mill premixer.

Compliance with annual limits shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total) [T1].

The above limitations were established in Permit 00050090, pursuant to 35 IAC Part 203. These limits ensure that the construction and/or modification addressed in the aforementioned permit does not constitute a new major source or major modification pursuant to Title I of the CAA, specifically 35 IAC Part 203 [T1].

b. Operation and total emissions from emission units PM5-6 and VM1-4 shall not exceed the following limits:

Total	Production	Rate
(Ton/Mo)		(Ton/Yr)
820		8,150

	Pollutant	Emissions
Pollutant	(Short Term)	(Ton/Year)
	<u> </u>	
MOV	2.25 ton/mo	22.45
PM	1.21 lb/hr	0.28

These limits are based on the maximum operating rates, emission factors, dust collector efficiency, and maximum emissions from the affected regular grinding lines.

Compliance with annual limits shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total) [T1].

The above limitations were established in Permit 02020036, pursuant to 35 IAC Part 203 and 40 CFR 52.21, Prevention of Significant Deterioration (PSD). These limits ensure that the construction and/or modification addressed in the aforementioned permit does not constitute a new major source or major modification pursuant to Title I of the CAA, specifically 35 IAC Part 203 and the federal rules for Prevention of Significant Deterioration (PSD), 40 CFR 52.21 [T1].

7.2.7 Testing Requirements

a. Upon request of the Illinois EPA or USEPA, the VOM emissions from an affected regular grinding line shall be determined in accordance Reference Method 18, 25 or 25A, specified in 40 CFR 60 Appendix A, pursuant to 35 IAC 218.105. Use of an adaptation of these test methods may not be used unless approved by the Illinois EPA and the USEPA on a case by case basis. The Permittee must submit sufficient documentation for the Illinois EPA and the USEPA to find that the test methods specified above will yield inaccurate results or are otherwise inappropriate and that the proposed adaptation is appropriate [35 IAC 218.105(f)].

7.2.8 Monitoring Requirements

- a. The Permittee shall follow the source wide monitoring requirements in Condition 5.5.2 that include this unit.
- b. On at least a weekly basis, the Permittee shall monitor and record the pressure drop across the dust collector to ensure proper operation (e.g., for indications of deterioration), pursuant to Section 39.5(7)(b) and (d) of the Act.

7.2.9 Recordkeeping Requirements

In addition to the records required by Condition 5.9, the Permittee shall maintain records of the following items for each

affected regular grinding line to demonstrate compliance with Conditions 5.6.1 and 7.2.3 through 7.2.8, pursuant to Section 39.5(7)(b) of the Act:

- a. For each affected regular grinding line, the Permittee shall maintain all records necessary to demonstrate compliance with 35 IAC 218, Subpart AA at the source for a period of three years [35 IAC 218.637(b)], or for such longer period as may be required by this permit (see Conditions 5.9.4 and 9.6.3).
- b. The manufacturer's specifications shall be kept on file at the plant by the owner or operator of the grinding mill and be made available to any person upon verbal or written request during business hours [35 IAC 218.625(c)].
- c. Monthly and annual records of the following items for all affected regular grinding lines as a group and separately for the affected basket mill premixer:
 - i. Amount of ink and base production (ton/mo and ton/yr);
 - ii. VOM and pigment content for the ink and base
 production (weight percent);
 - iii. Total VOM and PM emissions calculated based on the compliance procedures in Condition 7.2.12; and
 - iv. Calculations of maximum hourly VOM emissions, based on the compliance procedures in Condition 7.2.12.
- d. Maintenance log for the dust collector, including pressure drop measurements required by Condition 7.2.8.
- e. Records for Malfunctions and Breakdowns

The Permittee shall maintain records, pursuant to 35 IAC 201.263, of continued operation of an affected regular grinding line subject to Condition 7.2.3(f) during malfunctions and breakdown, which as a minimum, shall include:

- i. Date and duration of malfunction or breakdown.
- ii. A detailed explanation of the malfunction or breakdown.
- iii. An explanation why the affected regular grinding line continued to operate in accordance with Condition 7.2.3(f).
- iv. The measures used to reduce the quantity of emissions and the duration of the event.

- v. The steps taken to prevent similar malfunctions or breakdowns or reduce their frequency and severity.
- vi. The amount of release above typical emissions during malfunction/breakdown.

7.2.10 Reporting Requirements

- a. The Permittee shall promptly notify the Illinois EPA, Air Compliance Unit, of deviations of an affected regular grinding line with the permit requirements as follows, pursuant to Section 39.5(7)(f)(ii) of the Act. Reports shall describe the probable cause of such deviations, and any corrective actions or preventive measures taken:
 - i. Any deviation from the applicable permit requirements of Section 7.2, including emission limits in Condition 7.2.6, shall be reported to the Illinois EPA within 30 days of such occurrence. The report shall include the identity of the requirements for which a deviation occurred, a description of the deviation, its probable cause, and any corrective actions or preventive measures taken [39.5(7)(f)(ii) of the Act].
 - ii. Any violation of the requirements of 35 IAC 218
 Subpart AA shall be reported by sending a copy of any
 record showing a violation to the Illinois EPA,
 Compliance Section, within 30 days following the
 occurrence of the violation.
- b. Reporting of Malfunctions and Breakdowns

The Permittee shall provide the following notification and reports to the Illinois EPA, Air Compliance Unit and Regional Field Office, pursuant to 35 IAC 201.263, concerning continued operation of an affected regular grinding line subject to Condition 7.2.3(f) during malfunction or breakdown:

- i. The Permittee shall notify the Illinois EPA's regional office by telephone as soon as possible during normal working hours, but no later than three (3) days, upon the occurrence of noncompliance due to malfunction or breakdown.
- ii. Upon achievement of compliance, the Permittee shall give a written follow-up notice to the Illinois EPA, Air Compliance Unit and Regional Field Office, providing a detailed explanation of the event, an explanation why continued operation of the affected regular grinding line was necessary, the length of time during which operation continued under such conditions, the measures taken by the Permittee to

minimize and correct deficiencies with chronology, and when the repairs were completed or when the affected regular grinding line was taken out of service.

iii. If compliance is not achieved within 5 working days of the occurrence, the Permittee shall submit interim status reports to the Illinois EPA, Air Compliance Unit and Regional Field Office, within 5 days of the occurrence and every 14 days thereafter, until compliance is achieved. These interim reports shall provide a brief explanation of the nature of the malfunction or breakdown, corrective actions accomplished to date, actions anticipated to occur with schedule, and the expected date on which repairs will be complete or the affected regular grinding line will be taken out of service.

7.2.11 Operational Flexibility/Anticipated Operating Scenarios

The Permittee is authorized to make the following physical or operational change with respect to an affected regular grinding line without prior notification to the Illinois EPA or revision of this permit. This condition does not affect the Permittee's obligation to properly obtain a construction permit in a timely manner for any activity constituting construction or modification of the source, as defined in 35 IAC 201.102:

- a. Changes in raw materials and ink formulations, as long as such changes do not cause a violation of the emission limitations in Condition 7.2.6 and Condition 5.6.1.
- b. Replacement of emission unit components in kind, provided that the replacement does not increase the amount of any specified air contaminant emitted by such equipment and does not result in the emission of any specified air contaminant not previously emitted.

7.2.12 Compliance Procedures

- a. Compliance with the PM limitations in this section is addressed by the proper operation, maintenance, and workpractices inherent in operation of each affected regular grinding line and associated control equipment.
- b. Compliance with emission limitations in this section and Condition 5.6.1 is addressed by the recordkeeping requirements in Condition 7.2.9 and by use of the formulae and emission factors listed in Attachment 5 or by use of emission factors derived from a site specific emission factor if that emission factor was developed from stack test data and based on the worst case scenario. Site specific VOM emission factors other than those listed in Attachment 5 shall be approved by the Illinois EPA, and the

ERMS baseline shall be revised to reflect any new methods, pursuant to 35 IAC 205.337. (Note that emission factors in Attachment 5 were determined using procedures in Condition 5.12.1.)

- i. Total VOM emissions from each affected regular grinding line = the sum of VOM emissions from process operations, process equipment leaks, and solvent cleaning.
- ii. VOM emissions from process operations and solvent cleaning:

VOM emissions = Production or Solvent Use (lb) \times VOM Content (%VOM) \times Emission Factor (lb/lb VOM).

iii. VOM emissions from process equipment leaks:

VOM emissions = Charging Hours (hr) x Emission Rate (lb/hr).

iv. PM emissions from pigment mixing:

PM emissions = Production (lb) x Pigment Content (%)
x 0.001 lb/lb pigment x [1 - (Capture Efficiency, %)
x (Control Efficiency, %)]

Where 0.001 lb/lb pigment is the emission factor for pigment mixing, Table 6.7-1, AP-42, and the capture and control efficiencies are based on engineering estimates or manufacturer's recommendations.

c. Compliance of the affected regular grinding lines with the emission limitation in Condition 7.2.3(c) is addressed by the work-practices inherent in the operation of the affected regular grinding lines and the recordkeeping requirements in Condition 7.2.9(d).

7.3 Emission Units 08-11: Bulk Grinding Control: Dust Collector

7.3.1 Description

Bulk Grinding is a batch operation producing base or finished ink. During bulk grinding, solvent, varnish, and pigment are added to a pre-mix vessel. The pre-mix vessel is a closed unit which operates approximately 3 hours. Following mixing, the base is pumped through a sealed grinding mill to a letdown tank, where it is adjusted to final specifications. The finished ink is filtered and packaged for shipping. PM is emitted when pigment is added at the pre-mix vessel and is controlled by a bag filter. VOM is emitted during vessel charging, mixing, and packaging. Premix tanks and letdown tanks include condensers for product recovery.

7.3.2 List of Emission Units and Air Pollution Control Equipment

Emission		Date	Emission Control
Unit	Description	Constructed	Equipment
0.8	4 Premix Tanks	1992	Dust Collector #1
	(M1A-M4A)		(DC01)
09	5 Horizontal Mills	1992	None
	(M1BA, M1B-M4B)		
10	4 Letdown Tanks	1992	None
	(M1C-M4C)		
11	Drum Filler and Tote	1992	None
	Filler (M5A-M5B)		ļ

7.3.3 Applicable Provisions and Regulations

- An "affected bulk grinding line" for the purpose of these unit specific conditions, is a line which applies mixing and grinding during ink or base manufacturing. This includes Premix Tanks M1A-4A, Horizontal Mills M1BA and M1B-M4B, Letdown Tanks M1C-4C, Drum Filler M5A, and Tote Filler M5B (Emission Units 08-11).
 - ii. Each affected bulk grinding line is subject to the emission limits identified in Condition 5.3.2.
- b. The affected bulk grinding lines are subject to 35 IAC 218, Subpart AA: Paint and Ink Manufacturing, because the source has the potential to emit 22.7 Mg (25 tons) or more of VOM per year, in aggregate. These requirements are described in Conditions 5.5 and 7.3.5(a) and (b).
- c. The affected bulk grinding lines are subject to 35 IAC Section 218.301, which provides that no person shall cause or allow the discharge of more than 3.6 kg/hr (8 lb/hr) of organic material into the atmosphere from any emission unit, except as provided in 35 IAC 218.302 and with the

following exception: if no odor nuisance exists the limitation shall apply only to photochemically reactive material.

d. The affected bulk grinding lines are subject to 35 IAC 212.321, which provides that:

No person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in subsection (c) of 35 IAC 212.321 (See also Attachment 2) [35 IAC 212.321(a)].

e. Malfunction and Breakdown Provisions

The Permittee is authorized to continue operation of an affected bulk grinding line in violation of the applicable standards in Conditions 7.3.3(d) or 7.3.5(a) in the event of a malfunction or breakdown of a dust collector or tank cover, subject to the following provisions. This authorization is provided pursuant to 35 IAC 201.262 as the Permittee has submitted proof that continued operation is required to provide essential service, prevent risk of injury to personnel or severe damage to equipment. This authorization supersedes the general prohibition in Condition 9.2.3 against continued operation in such circumstances:

- i. This authorization only allows such continued operation as necessary to provide essential service or prevent risk of injury to personnel or severe damage to equipment and does not extend to continued operation solely for the economic benefit of the Permittee. As provided by 35 IAC 201.265, this authorization does not shield the Permittee from enforcement for any such violation and shall only constitute a prima facie defense to such an enforcement action provided that the Permittee has fully complied with all associated terms and conditions.
- ii. Upon occurrence of excess emissions due to malfunction or breakdown, the Permittee shall as soon as practical reduce operation, repair, or remove the affected bulk grinding line from service so that excess emissions cease. Unless the Permittee obtains an extension from the Illinois EPA, this shall be accomplished within 7 days*. The Permittee may obtain an extension for up to a total of 7 days* from the Illinois EPA, Air Regional Office. The Illinois

EPA, Air Compliance Section, in Springfield, may grant a longer extension if the Permittee demonstrates that extraordinary circumstances exist and the affected bulk grinding line can not reasonably be repaired or removed from service within the allowed time.

- * For this purpose and other related provisions, time shall be measured from the start of a particular incident. The absence of excess emissions for a short period shall not be considered to end the incident if excess emissions resume. In such circumstances, the incident shall be considered to continue until corrective actions are taken so that excess emissions cease or the Permittee takes the affected bulk grinding line out of service.
- iii. A. The Permittee shall fulfill the applicable recordkeeping and reporting requirements of Conditions 7.3.9(e) and 7.3.10(b).
 - B. Following notification to the Illinois EPA of a malfunction or breakdown with excess emissions, the Permittee shall comply with all reasonable directives of the Illinois EPA with respect to such incident, pursuant to 35 IAC 201.263.

7.3.4 Non-Applicability of Regulations of Concern

a. The affected bulk grinding lines are not subject to 35 IAC 218, Subpart TT, because the requirements of 35 IAC 218, Subpart TT do not apply to a source's VOM emission units which are included within any of the categories specified in 35 IAC 218, Subpart AA [35 IAC 218.980(a)].

7.3.5 Control Requirements and Work Practices

The Permittee shall comply with the following requirements, in addition to the source wide requirements in Condition 5.5:

- a. Open-top mills, tanks, vats or vessels:
 - i. The mill, tank, vat or vessel is equipped with a cover which completely covers the mill, tank, vat or vessel opening except for an opening no larger than necessary to allow for safe clearance for a mixer shaft. Such cover shall extend at least 1.27 cm (0.5 in) beyond the outer rim of the opening or be attached to the rim [35 IAC 218.624(a)].
 - ii. The cover remains closed except when production, sampling, maintenance or inspection procedures require access [35 IAC 218.624(b)].

iii. The cover is maintained in good condition such that, when in place, it maintains contact with the rim of the opening for at least 90 percent of the circumference of the rim [35 IAC 218.624(c)].

b. Grinding mills:

- i. No person shall operate a grinding mill for the production of paint or ink which is not maintained in accordance with the manufacturer's specifications [35 IAC 218.625(a)].
- ii. No person shall operate a grinding mill fabricated or modified after the effective date of this Subpart which is not equipped with fully enclosed screens [35 IAC 218.625(b)].

7.3.6 Production and Emission Limitations

In addition to Condition 5.3.2 and the source-wide emission limitations in Condition 5.6, the affected bulk grinding lines are subject to the following:

a. Operations and VOM emissions of all affected bulk grinding lines shall not exceed the following limits:

Ink Production Rate		VOM Emissions	
(Ton/Mo)	(Ton/Yr)	(Ton/Mo)	(Ton/Yr)
1 , 750	15,163.2	2.74	23.72

These limits are based on maximum operating rates, emission factors, and dust collector efficiencies, and maximum emissions from all emission points on each line. Compliance with annual limits shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total) [T1].

The above limitations contain revisions to previously issued Construction Permit 91120054. The source has requested that the Illinois EPA establish conditions in this permit that allow various refinements from the conditions of this construction permit, consistent with the information provided in the CAAPP application. The source has requested these revisions and has addressed the applicability and compliance of Title I of the CAA, specifically 35 IAC Part 203, Major Stationary Sources Construction and Modification and/or 40 CFR 52.21, Prevention of Significant Deterioration (PSD). These limits continue to ensure that the construction and/or modification addressed in this construction permit (in conjunction with Construction Permit 91120056, see

Condition 7.4.6) does not constitute a new major source or major modification pursuant to these rules. These limits are the primary enforcement mechanism for the equipment and activities permitted in this construction permit and the information in the CAAPP application contains the most current and accurate information for the source. Specifically, emission limits for each individual affected bulk grinding line have been removed, while the total annual emission limit for all affected bulk grinding lines remains the same [T1R].

7.3.7 Testing Requirements

a. Upon request of the Illinois EPA or USEPA, the VOM emissions from an affected bulk grinding line shall be determined in accordance with Reference Method 18, 25 or 25A, specified in 40 CFR 60 Appendix A, pursuant to 35 IAC 218.105. Use of an adaptation of these test methods may not be used unless approved by the Illinois EPA and the USEPA on a case by case basis. The Permittee must submit sufficient documentation for the Illinois EPA and the USEPA to find that the test methods specified above will yield inaccurate results or are otherwise inappropriate and that the proposed adaptation is appropriate [35 IAC 218.105(f)].

7.3.8 Monitoring Requirements

- a. The Permittee shall follow the source wide monitoring requirements in Condition 5.5.2 that include this unit.
- b. On at least a weekly basis, the Permittee shall monitor and record the pressure drop across the dust collector to ensure proper operation (e.g., for indications of deterioration), pursuant to Section 39.5(7)(b) and (d) of the Act.

7.3.9 Recordkeeping Requirements

In addition to the records required by Condition 5.9, the Permittee shall maintain records of the following items for each affected bulk grinding line to demonstrate compliance with Conditions 5.6.1 and 7.3.3 through 7.3.8, pursuant to Section 39.5(7)(b) of the Act:

- a. For each affected bulk grinding line, the Permittee shall maintain all records necessary to demonstrate compliance with 35 IAC 218, Subpart AA at the source for a period of three years [35 IAC 218.637(b)], or for such longer period as may be required by this permit (see Conditions 5.9.4 and 9.6.3).
- b. The manufacturer's specifications shall be kept on file at the plant by the owner or operator of the grinding mill and

be made available to any person upon verbal or written request during business hours [35 IAC 218.625(c)].

- c. Monthly and annual records of the following items for all affected bulk grinding lines as a group:
 - i. Amount of ink and base production (ton/mo and ton/yr);
 - ii. VOM and pigment content for the ink and base production (weight percent);
 - iii. Total VOM and PM emissions calculated based on the compliance procedures in Condition 7.3.12; and
 - iv. Calculations of maximum hourly VOM emissions, based on the compliance procedures in Condition 7.3.12.
- d. Maintenance log for the dust collector, including pressure drop measurements required by Condition 7.3.8.
- e. Records for Malfunctions and Breakdowns

The Permittee shall maintain records, pursuant to 35 IAC 201.263, of continued operation of an affected bulk grinding line subject to Condition 7.3.3(e) during malfunctions and breakdown, which as a minimum, shall include:

- i. Date and duration of malfunction or breakdown.
- ii. A detailed explanation of the malfunction or breakdown.
- iii. An explanation why the affected grinding line continued to operate in accordance with Condition $7.3.3\,(\mathrm{e})$.
- iv. The measures used to reduce the quantity of emissions and the duration of the event.
- v. The steps taken to prevent similar malfunctions or breakdowns or reduce their frequency and severity.
- vi. The amount of release above typical emissions during malfunction/breakdown.

7.3.10 Reporting Requirements

a. The Permittee shall promptly notify the Illinois EPA, Air Compliance Unit, of deviations of an affected bulk grinding line with the permit requirements as follows, pursuant to Section 39.5(7)(f)(ii) of the Act. Reports shall describe

the probable cause of such deviations, and any corrective actions or preventive measures taken:

- i. Any deviation from the applicable permit requirements of Section 7.3, including emission limits in Condition 7.3.6, shall be reported to the Illinois EPA within 30 days of such occurrence. The report shall include the identity of the requirements for which a deviation occurred, a description of the deviation, its probable cause, and any corrective actions or preventive measures taken [39.5(7)(f)(ii) of the Act].
- ii. Any violation of the requirements of 35 IAC 218
 Subpart AA shall be reported by sending a copy of any record showing a violation to the Illinois EPA,
 Compliance Section, within 30 days following the occurrence of the violation.
- b. Reporting of Malfunctions and Breakdowns

The Permittee shall provide the following notification and reports to the Illinois EPA, Air Compliance Unit and Regional Field Office, pursuant to 35 IAC 201.263, concerning continued operation of an affected bulk grinding line subject to Condition 7.3.3(e) during malfunction or breakdown:

- i. The Permittee shall notify the Illinois EPA's regional office by telephone as soon as possible during normal working hours, but no later than three (3) days, upon the occurrence of noncompliance due to malfunction or breakdown.
- ii. Upon achievement of compliance, the Permittee shall give a written follow-up notice to the Illinois EPA, Air Compliance Unit and Regional Field Office, providing a detailed explanation of the event, an explanation why continued operation of the affected bulk grinding line was necessary, the length of time during which operation continued under such conditions, the measures taken by the Permittee to minimize and correct deficiencies with chronology, and when the repairs were completed or when the affected bulk grinding line was taken out of service.
- iii. If compliance is not achieved within 5 working days of the occurrence, the Permittee shall submit interim status reports to the Illinois EPA, Air Compliance Unit and Regional Field Office, within 5 days of the occurrence and every 14 days thereafter, until compliance is achieved. These interim reports shall provide a brief explanation of the nature of the malfunction or breakdown, corrective actions

accomplished to date, actions anticipated to occur with schedule, and the expected date on which repairs will be complete or the affected bulk grinding line will be taken out of service.

7.3.11 Operational Flexibility/Anticipated Operating Scenarios

The Permittee is authorized to make the following physical or operational change with respect to an affected bulk grinding line without prior notification to the Illinois EPA or revision of this permit. This condition does not affect the Permittee's obligation to properly obtain a construction permit in a timely manner for any activity constituting construction or modification of the source, as defined in 35 IAC 201.102:

- a. Changes in raw materials and ink formulations, as long as such changes do not cause a violation of the emission limitations in Condition 7.3.6 and Condition 5.6.1.
- b. Replacement of emission unit components in kind, provided that the replacement does not increase the amount of any specified air contaminant emitted by such equipment and does not result in the emission of any specified air contaminant not previously emitted.

7.3.12 Compliance Procedures

- a. Compliance with the PM limitations in this section is addressed by the proper operation, maintenance, and workpractices inherent in operation of each affected bulk grinding line and associated control equipment.
- b. Compliance with emission limitations in this section and Condition 5.6.1 is addressed by the recordkeeping requirements in Condition 7.3.9 and by use of the formulae and emission factors listed in Attachment 5 or by use of emission factors derived from a site specific emission factor if that emission factor was developed from stack test data and based on the worst case scenario. Site specific VOM emission factors other than those listed in Attachment 5 shall be approved by the Illinois EPA, and the ERMS baseline shall be revised to reflect any new methods, pursuant to 35 IAC 205.337. (Note that emission factors in Attachment 5 were determined using procedures in Condition 5.12.1.)
 - i. Total VOM emissions from each affected bulk grinding line = the sum of VOM emissions from process operations, process equipment leaks, solvent cleaning, tanker loading, and filter openings.
 - ii. VOM emissions from process operations, solvent cleaning, and filter openings:

VOM emissions = Production or Solvent Use (lb) \times VOM Content (%VOM) \times Emission Factor (lb/lb VOM).

iii. VOM emissions from process equipment leaks:

VOM emissions = Charging Hours (hr) x Emission Rate (lb/hr).

iv. VOM emissions from tanker loading:

VOM emissions = Number of Loads x Emission Factor (1b/load).

v. PM emissions from pigment mixing:

PM emissions = Production (lb) x Pigment Content (%)
x 0.001 lb/lb pigment x [1 - (Capture Efficiency, %)
x (Control Efficiency, %)]

Where 0.001 lb/lb pigment is the emission factor for pigment mixing, Table 6.7-1, AP-42, and the capture and control efficiencies are based on engineering estimates or manufacturer's recommendations.

c. Compliance of the affected bulk grinding lines with the emission limitation in Condition 7.3.3(c) is addressed by the work-practices inherent in the operation of the affected bulk grinding lines and the recordkeeping requirements in Condition 7.3.9(d).

7.4 Emission Units 12: Cutters Control: Dust Collector

7.4.1 Description

Cutters are a batch operation producing clear coatings or finished ink. In the Cutters Department, solvent, varnish, and other additives such as resin or pigment are added to a mixing vessel. The clear coating or ink is mixed, adjusted to final specifications, filtered, and packaged or transferred to bulk storage. PM is emitted when resin or pigment is added to the mixer and is controlled by a bag filter. VOM is emitted during charging, mixing, and packaging. Some of the cutters include condensers for product recovery.

7.4.2 List of Emission Units and Air Pollution Control Equipment

			Emission
Emission		Date	Control
Unit	Description	Constructed	Equipment
12	21 Cutters	Prior to 1972	Dust
	(MC1-21)	(MC1-19 modified in	Collector #1
		1992, MC20-21	(DC01)
		constructed in 2002)	

7.4.3 Applicable Provisions and Regulations

- a. i. The "affected cutters" for the purpose of these unit specific conditions, are Cutters MC1 through 21 (Emission Unit 12) which produce ink or coating through mixing of raw materials.
 - ii. Each affected cutter is subject to the emission limits identified in Condition 5.3.2.
- b. The affected cutters are subject to 35 IAC 218, Subpart AA: Paint and Ink Manufacturing, because the source has the potential to emit 22.7 Mg (25 tons) or more of VOM per year, in aggregate. These requirements are described in Conditions 5.5 and 7.4.5(a).
- c. The affected cutters are subject to 35 IAC Section 218.301, which provides that no person shall cause or allow the discharge of more than 3.6 kg/hr (8 lb/hr) of organic material into the atmosphere from any emission unit, except as provided in 35 IAC 218.302 and with the following exception: if no odor nuisance exists the limitation shall apply only to photochemically reactive material.
- d. The affected cutters are subject to 35 IAC 212.321, which provides that:

No person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any

new process emission unit, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in subsection (c) of 35 IAC 212.321 (See also Attachment 2) [35 IAC 212.321(a)].

e. Malfunction and Breakdown Provisions

The Permittee is authorized to continue operation of an affected cutter in violation of the applicable standards in Conditions 7.4.3(d) or 7.4.5(a) in the event of a malfunction or breakdown of a dust collector or cover, subject to the following provisions. This authorization is provided pursuant to 35 IAC 201.262 as the Permittee has submitted proof that continued operation is required to provide essential service, prevent risk of injury to personnel or severe damage to equipment. This authorization supersedes the general prohibition in Condition 9.2.3 against continued operation in such circumstances:

- i. This authorization only allows such continued operation as necessary to provide essential service or prevent risk of injury to personnel or severe damage to equipment and does not extend to continued operation solely for the economic benefit of the Permittee. As provided by 35 IAC 201.265, this authorization does not shield the Permittee from enforcement for any such violation and shall only constitute a prima facie defense to such an enforcement action provided that the Permittee has fully complied with all associated terms and conditions.
- ii. Upon occurrence of excess emissions due to malfunction or breakdown, the Permittee shall as soon as practical reduce operation, repair, or remove the affected cutter from service so that excess emissions cease. Unless the Permittee obtains an extension from the Illinois EPA, this shall be accomplished within 7 days*. The Permittee may obtain an extension for up to a total of 7 days* from the Illinois EPA, Air Regional Office. The Illinois EPA, Air Compliance Section, in Springfield, may grant a longer extension if the Permittee demonstrates that extraordinary circumstances exist and the affected cutter can not reasonably be repaired or removed from service within the allowed time.
 - * For this purpose and other related provisions, time shall be measured from the start of a particular incident. The absence of excess

emissions for a short period shall not be considered to end the incident if excess emissions resume. In such circumstances, the incident shall be considered to continue until corrective actions are taken so that excess emissions cease or the Permittee takes the affected cutter out of service.

- iii. A. The Permittee shall fulfill the applicable recordkeeping and reporting requirements of Conditions 7.4.9(f) and 7.4.10(b).
 - B. Following notification to the Illinois EPA of a malfunction or breakdown with excess emissions, the Permittee shall comply with all reasonable directives of the Illinois EPA with respect to such incident, pursuant to 35 IAC 201.263.

7.4.4 Non-Applicability of Regulations of Concern

- a. The affected cutters are not subject to 35 IAC 218, Subpart TT, because the requirements of 35 IAC 218, Subpart TT do not apply to a source's VOM emission units which are included within any of the categories specified in 35 IAC 218, Subpart AA [35 IAC 218.980(a)].
- b. The affected cutters are not subject to 35 IAC Part 203, Major Stationary Sources Construction and Modification (MSSCAM), because the net VOM emissions increase from the construction of Cutters #20 and #21, including contemporaneous increases and decreases, was less than 25 tons per year (see Attachment 6).

7.4.5 Control Requirements and Work Practices

The Permittee shall comply with the following requirements, in addition to the source wide requirements in Condition 5.5:

- a. Open-top mills, tanks, vats or vessels:
 - i. The mill, tank, vat or vessel is equipped with a cover which completely covers the mill, tank, vat or vessel opening except for an opening no larger than necessary to allow for safe clearance for a mixer shaft. Such cover shall extend at least 1.27 cm (0.5 in) beyond the outer rim of the opening or be attached to the rim [35 IAC 218.624(a)].
 - ii. The cover remains closed except when production, sampling, maintenance or inspection procedures require access [35 IAC 218.624(b)].
 - iii. The cover is maintained in good condition such that, when in place, it maintains contact with the rim of

the opening for at least 90 percent of the circumference of the rim [35 IAC 218.624(c)].

7.4.6 Production and Emission Limitations

In addition to Condition 5.3.2 and the source-wide emission limitations in Condition 5.6, the affected cutters are subject to the following:

a. Operation and VOM emissions of Cutters #1 (1500 gallon capacity), Cutter #4 (2000 gallon capacity), Cutter #5 (3000 gallon capacity), Cutter #6 (3000 gallon capacity), Cutter #14 (700 gallon capacity), and Cutter #16 (700 gallon capacity) shall not exceed the following limits:

Total Production Rate		VOM Emissions	
Ton/Month	Ton/Year	Ton/Month	Ton/Year
0 505	05 560	2 02	20 50
2 , 535	25 , 560	2.83	28.50

These limits are based on the total maximum emission rate for the cutters and the maximum hours of operation (8760 hr/yr). The 28.50 ton/yr limit is based on a net increase of 15.0 ton/yr in VOM emissions in 1992 compared to historical emissions. The increase in VOM emission is due to the replacement of motors and installation of stack condensers.

Compliance with annual limits shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total) [T1].

The above limitations also contain revisions to previously issued Permit 91120056. The source has requested that the Illinois EPA establish conditions in this permit that allow various refinements from the conditions of this construction permit, consistent with the information provided in the CAAPP application. The source has requested these revisions and has addressed the applicability and compliance of Title I of the CAA, specifically 35 IAC Part 203, Major Stationary Sources Construction and Modification and/or 40 CFR 52.21, Prevention of Significant Deterioration (PSD). These limits continue to ensure that the construction and/or modification addressed in this construction permit (in conjunction with Permit 91120054, see Condition 7.3.6) does not constitute a new major source or major modification pursuant to these rules. These limits are the primary enforcement mechanism for the equipment and activities permitted in this construction permit and the information in the CAAPP application contains the most current and accurate information for the source. Specifically, emission limits for each individual affected cutter have

been removed, while the total annual emission limit for all affected cutters remains the same [T1R].

b. Operation and VOM emissions of Cutter #20 and Cutter #21 shall not exceed the following limits:

Total Production Rate		VOM Emissions	
Ton/Month	<u>Ton/Year</u>	<u>Ton/Month</u>	<u>Ton/Year</u>
220	2,150	0.135	1.35

These limits are based on the total maximum emission rate for the cutters and the maximum hours of operation (8760 hr/yr).

Compliance with annual limits shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total) [T1].

The above limitations were established in Permit 02020036, pursuant to 35 IAC Part 203. These limits ensure that the construction and/or modification addressed in the aforementioned Permit does not constitute a new major source or major modification pursuant to 35 IAC Part 203 [T1].

c. This permit is issued based on negligible emissions of PM from the affected cutters #20 and #21. For this purpose, emissions shall not exceed nominal emission rates of 0.1 lb/hr and 0.44 ton/yr.

The above limitations were established in Permit 02020036, pursuant to 35 IAC Part 203. These limits ensure that the construction and/or modification addressed in the aforementioned Construction Permit does not constitute a new major source or major modification pursuant to 35 IAC Part 203 [T1].

7.4.7 <u>Testing Requirements</u>

a. Upon request of the Illinois EPA or USEPA, the VOM emissions from an affected cutter shall be determined in accordance with Reference Method 18, 25 or 25A, specified in 40 CFR 60 Appendix A, pursuant to 35 IAC 218.105. Use of an adaptation of these test methods may not be used unless approved by the Illinois EPA and the USEPA on a case by case basis. The Permittee must submit sufficient documentation for the Illinois EPA and the USEPA to find that the test methods specified above will yield inaccurate results or are otherwise inappropriate and that the proposed adaptation is appropriate [35 IAC 218.105(f)].

7.4.8 Monitoring Requirements

- a. The Permittee shall follow the source wide monitoring requirements in Condition 5.5.2 that include this unit.
- b. On at least a weekly basis, the Permittee shall monitor and record the pressure drop across the dust collector to ensure proper operation (e.g., for indications of deterioration), pursuant to Section 39.5(7)(b) and (d) of the Act.

7.4.9 Recordkeeping Requirements

In addition to the records required by Condition 5.9, the Permittee shall maintain records of the following items for each affected cutter to demonstrate compliance with Conditions 5.6.1 and 7.4.3 through 7.4.8, pursuant to Section 39.5(7)(b) of the Act:

- a. For each affected cutter, the Permittee shall maintain all records necessary to demonstrate compliance with 35 IAC 218, Subpart AA at the source for a period of three years [35 IAC 218.637(b)], or for such longer period as may be required by this permit (see Conditions 5.9.4 and 9.6.3).
- the manufacturer's specifications shall be kept on file at the plant by the owner or operator of the grinding mill and be made available to any person upon verbal or written request during business hours [35 IAC 218.625(c)].
- c. Monthly and annual records of the following items for all affected cutters as a group:

 - ii. Amount of ink, base, and coating production for Cutters #1, 4, 5, 6, 14, and 16 (ton/mo and ton/yr);
 - iii. Amount of ink, base, and coating production for Cutters #20 and 21 (ton/mo and ton/yr);
 - iv. VOM and pigment content for the ink, base, and coating production (weight percent);
 - v. Total VOM and PM emissions calculated based on the compliance procedures in Condition 7.4.12. If the total VOM emissions for all cutters are less than the total emission limit in Condition 7.4.6(a), then the separate records of VOM emissions for the six cutters in (ii) above are not required; and
 - vi. Calculations of maximum hourly VOM emissions, based on the compliance procedures in Condition 7.4.12.

- e. Maintenance log for the dust collector, including pressure drop measurements required by Condition 7.4.8.
- f. Records for Malfunctions and Breakdowns

The Permittee shall maintain records, pursuant to 35 IAC 201.263, of continued operation of an affected cutter subject to Condition 7.4.3(e) during malfunctions and breakdown, which as a minimum, shall include:

- i. Date and duration of malfunction or breakdown.
- ii. A detailed explanation of the malfunction or breakdown.
- iii. An explanation why the affected cutter continued to operate in accordance with Condition 7.4.3(e).
- iv. The measures used to reduce the quantity of emissions and the duration of the event.
- v. The steps taken to prevent similar malfunctions or breakdowns or reduce their frequency and severity.
- vi. The amount of release above typical emissions during malfunction/breakdown.

7.4.10 Reporting Requirements

- a. The Permittee shall promptly notify the Illinois EPA, Air Compliance Unit, of deviations of an affected cutter with the permit requirements as follows, pursuant to Section 39.5(7)(f)(ii) of the Act. Reports shall describe the probable cause of such deviations, and any corrective actions or preventive measures taken:
 - i. Any deviation from the applicable permit requirements of Section 7.4, including emission limits in Condition 7.4.6, shall be reported to the Illinois EPA within 30 days of such occurrence. The report shall include the identity of the requirements for which a deviation occurred, a description of the deviation, its probable cause, and any corrective actions or preventive measures taken [39.5(7)(f)(ii) of the Act].
 - ii. Any violation of the requirements of 35 IAC 218
 Subpart AA shall be reported by sending a copy of any
 record showing a violation to the Illinois EPA,
 Compliance Section, within 30 days following the
 occurrence of the violation.

b. Reporting of Malfunctions and Breakdowns

The Permittee shall provide the following notification and reports to the Illinois EPA, Air Compliance Unit and Regional Field Office, pursuant to 35 IAC 201.263, concerning continued operation of an affected cutter subject to Condition 7.4.3(e) during malfunction or breakdown:

- i. The Permittee shall notify the Illinois EPA's regional office by telephone as soon as possible during normal working hours, but no later than three (3) days, upon the occurrence of noncompliance due to malfunction or breakdown.
- ii. Upon achievement of compliance, the Permittee shall give a written follow-up notice to the Illinois EPA, Air Compliance Unit and Regional Field Office, providing a detailed explanation of the event, an explanation why continued operation of the affected cutter was necessary, the length of time during which operation continued under such conditions, the measures taken by the Permittee to minimize and correct deficiencies with chronology, and when the repairs were completed or when the affected cutter was taken out of service.
- iii. If compliance is not achieved within 5 working days of the occurrence, the Permittee shall submit interim status reports to the Illinois EPA, Air Compliance Unit and Regional Field Office, within 5 days of the occurrence and every 14 days thereafter, until compliance is achieved. These interim reports shall provide a brief explanation of the nature of the malfunction or breakdown, corrective actions accomplished to date, actions anticipated to occur with schedule, and the expected date on which repairs will be complete or the affected cutter will be taken out of service.

7.4.11 Operational Flexibility/Anticipated Operating Scenarios

The Permittee is authorized to make the following physical or operational change with respect to an affected cutter without prior notification to the Illinois EPA or revision of this permit. This condition does not affect the Permittee's obligation to properly obtain a construction permit in a timely manner for any activity constituting construction or modification of the source, as defined in 35 IAC 201.102:

a. Changes in raw materials and ink formulations, as long as such changes do not cause a violation of the emission limitations in Condition 7.4.6 and Condition 5.6.1. b. Replacement of emission unit components in kind, provided that the replacement does not increase the amount of any specified air contaminant emitted by such equipment and does not result in the emission of any specified air contaminant not previously emitted.

7.4.12 Compliance Procedures

- a. Compliance with the PM limitations in this section is addressed by the proper operation, maintenance, and work-practices inherent in operation of each affected cutter and associated control equipment.
- Compliance with emission limitations in this section and Condition 5.6.1 is addressed by the recordkeeping requirements in Condition 7.4.9 and by use of the formulae and emission factors listed in Attachment 5 or by use of emission factors derived from a site specific emission factor if that emission factor was developed from stack test data and based on the worst case scenario. Site specific VOM emission factors other than those listed in Attachment 5 shall be approved by the Illinois EPA, and the ERMS baseline shall be revised to reflect any new methods, pursuant to 35 IAC 205.337. (Note that emission factors in Attachment 5 were determined using procedures in Condition 5.12.1.)
 - i. Total VOM emissions from each affected cutter, = the sum of VOM emissions from process operations, process equipment leaks, solvent cleaning, tanker loading, and filter openings.
 - ii. VOM emissions from process operations, solvent cleaning, and filter openings:

VOM emissions = Production or Solvent Use (lb) \times VOM Content (%VOM) \times Emission Factor (lb/lb VOM).

iii. VOM emissions from process equipment leaks:

VOM emissions = Charging Hours (hr) x Emission Rate (lb/hr).

iv. VOM emissions from tanker loading:

VOM emissions = Number of Loads x Emission Factor
(lb/load).

v. PM emissions from pigment mixing:

PM emissions = Production (lb) x Pigment Content (%)
x 0.001 lb/lb pigment x [1 - (Capture Efficiency, %)
x (Control Efficiency, %)]

Where 0.001 lb/lb pigment is the emission factor for pigment mixing, Table 6.7-1, AP-42, and the capture and control efficiencies are based on engineering estimates or manufacturer's recommendations.

c. Compliance of the affected cutters with the emission limitation in Condition 7.4.3(c) is addressed by the workpractices inherent in the operation of the affected cutters and the recordkeeping requirements in Condition 7.4.9(d). 7.5 Emission Units 13-14: Blending Control: Dust Collector

7.5.1 Description

Blending is a batch operation that produces finished ink or base. During blending, solvent, bases, resin, varnish, and pigment are added to a mixer. Following mixing, the ink or base is adjusted to final specifications and packaged. PM is emitted when pigment is added to the mixer and is controlled by a bag filter. VOM is emitted during charging, mixing, and packaging.

7.5.2 List of Emission Units and Air Pollution Control Equipment

			Emission
Emission		Date	Control
Unit	Description	Constructed	Equipment
13	2 Blending Mixers	Prior to 1972	Dust Collector
	(MBL01-02)		#1 (DC01)

7.5.3 Applicable Provisions and Regulations

- a. i. The "affected blenders" for the purpose of these unit specific conditions, are Blending Mixers MBL01 and 02 (Emission Unit 13) which produce ink or base through blending and mixing of raw materials.
 - ii. Each affected blender is subject to the emission limits identified in Condition 5.3.2.
- b. The affected blenders are subject to 35 IAC 218, Subpart AA: Paint and Ink Manufacturing, because the source has the potential to emit 22.7 Mg (25 tons) or more of VOM per year, in aggregate. These requirements are described in Conditions 5.5 and 7.5.5(a).
- c. The affected blenders are subject to 35 IAC Section 218.301, which provides that no person shall cause or allow the discharge of more than 3.6 kg/hr (8 lb/hr) of organic material into the atmosphere from any emission unit, except as provided in 35 IAC 218.302 and with the following exception: if no odor nuisance exists the limitation shall apply only to photochemically reactive material.
- d. The affected blenders are subject to 35 IAC 212.322, which provides that:

No person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any existing process emission unit, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced prior to April 14, 1972, at a source or premises, exceeds the allowable

emission rates specified in subsection (c) of 35 IAC 212.322 (See also Attachment 2) [35 IAC 212.322(a)].

e. Malfunction and Breakdown Provisions

The Permittee is authorized to continue operation of an affected blender in violation of the applicable standards in Conditions 7.5.3(d) or 7.5.5(a) in the event of a malfunction or breakdown of a dust collector or cover, subject to the following provisions. This authorization is provided pursuant to 35 IAC 201.262 as the Permittee has submitted proof that continued operation is required to provide essential service, prevent risk of injury to personnel or severe damage to equipment. This authorization supersedes the general prohibition in Condition 9.2.3 against continued operation in such circumstances:

- i. This authorization only allows such continued operation as necessary to provide essential service or prevent risk of injury to personnel or severe damage to equipment and does not extend to continued operation solely for the economic benefit of the Permittee. As provided by 35 IAC 201.265, this authorization does not shield the Permittee from enforcement for any such violation and shall only constitute a prima facie defense to such an enforcement action provided that the Permittee has fully complied with all associated terms and conditions.
- Upon occurrence of excess emissions due to ii. malfunction or breakdown, the Permittee shall as soon as practical reduce operation, repair, or remove the affected blender from service so that excess emissions cease. Unless the Permittee obtains an extension from the Illinois EPA, this shall be accomplished within 7 days*. The Permittee may obtain an extension for up to a total of 7 days* from the Illinois EPA, Air Regional Office. The Illinois EPA, Air Compliance Section, in Springfield, may grant a longer extension if the Permittee demonstrates that extraordinary circumstances exist and the affected blender can not reasonably be repaired or removed from service within the allowed time.
 - * For this purpose and other related provisions, time shall be measured from the start of a particular incident. The absence of excess emissions for a short period shall not be considered to end the incident if excess emissions resume. In such circumstances, the incident shall be considered to continue until

corrective actions are taken so that excess emissions cease or the Permittee takes the affected blender out of service.

- iii. A. The Permittee shall fulfill the applicable recordkeeping and reporting requirements of Conditions 7.5.9(e) and 7.5.10(b).
 - B. Following notification to the Illinois EPA of a malfunction or breakdown with excess emissions, the Permittee shall comply with all reasonable directives of the Illinois EPA with respect to such incident, pursuant to 35 IAC 201.263.

7.5.4 Non-Applicability of Regulations of Concern

a. The affected blenders are not subject to 35 IAC 218, Subpart TT, because the requirements of 35 IAC 218, Subpart TT do not apply to a source's VOM emission units which are included within any of the categories specified in 35 IAC 218, Subpart AA [35 IAC 218.980(a)].

7.5.5 Control Requirements and Work Practices

The Permittee shall comply with the following requirements, in addition to the source wide requirements in Condition 5.5:

- a. Open-top mills, tanks, vats or vessels:
 - i. The mill, tank, vat or vessel is equipped with a cover which completely covers the mill, tank, vat or vessel opening except for an opening no larger than necessary to allow for safe clearance for a mixer shaft. Such cover shall extend at least 1.27 cm (0.5 in) beyond the outer rim of the opening or be attached to the rim [35 IAC 218.624(a)].
 - ii. The cover remains closed except when production, sampling, maintenance or inspection procedures require access [35 IAC 218.624(b)].
 - iii. The cover is maintained in good condition such that, when in place, it maintains contact with the rim of the opening for at least 90 percent of the circumference of the rim [35 IAC 218.624(c)].

7.5.6 Production and Emission Limitations

Production and emission limitations are not set for the affected blenders. However, there are source-wide production and emission limitations set forth in Condition 5.6.

7.5.7 Testing Requirements

a. Upon request of the Illinois EPA or USEPA, the VOM emissions from an affected blender shall be determined in accordance with Reference Method 18, 25 or 25A, specified in 40 CFR 60 Appendix A, pursuant to 35 IAC 218.105. Use of an adaptation of these test methods may not be used unless approved by the Illinois EPA and the USEPA on a case by case basis. The Permittee must submit sufficient documentation for the Illinois EPA and the USEPA to find that the test methods specified above will yield inaccurate results or are otherwise inappropriate and that the proposed adaptation is appropriate [35 IAC 218.105(f)].

7.5.8 Monitoring Requirements

- a. The Permittee shall follow the source wide monitoring requirements in Condition 5.5.2 that include this unit.
- b. On at least a weekly basis, the Permittee shall monitor and record the pressure drop across the dust collector to ensure proper operation (e.g., for indications of deterioration), pursuant to Section 39.5(7)(b) and (d) of the Act.

7.5.9 Recordkeeping Requirements

In addition to the records required by Condition 5.9, the Permittee shall maintain records of the following items for each affected blender to demonstrate compliance with Conditions 5.6.1 and 7.5.3 through 7.5.8, pursuant to Section 39.5(7) (b) of the Act:

- a. For each affected blender, the Permittee shall maintain all records necessary to demonstrate compliance with 35 IAC 218, Subpart AA at the source for a period of three years [35 IAC 218.637(b)], or for such longer period as may be required by this permit (see Conditions 5.9.4 and 9.6.3).
- b. The manufacturer's specifications shall be kept on file at the plant by the owner or operator of the grinding mill and be made available to any person upon verbal or written request during business hours [35 IAC 218.625(c)].
- c. Monthly and annual records of the following items for all affected blenders as a group:
 - i. Amount of ink and base production (ton/mo and ton/yr);
 - ii. VOM and pigment content for the ink and base
 production (weight percent);

- iii. Total VOM and PM emissions calculated based on the compliance procedures in Condition 7.5.12
- iv. Calculations of maximum hourly VOM emissions, based on the compliance procedures in Condition 7.5.12.
- d. Maintenance log for the dust collector, including pressure drop measurements required by Condition 7.5.8.
- e. Records for Malfunctions and Breakdowns

The Permittee shall maintain records, pursuant to 35 IAC 201.263, of continued operation of an affected blender subject to Condition 7.5.3(e) during malfunctions and breakdown, which as a minimum, shall include:

- i. Date and duration of malfunction or breakdown.
- ii. A detailed explanation of the malfunction or breakdown.
- iii. An explanation why the affected blender continued to operate in accordance with Condition 7.5.3(e).
- iv. The measures used to reduce the quantity of emissions and the duration of the event.
- v. The steps taken to prevent similar malfunctions or breakdowns or reduce their frequency and severity.
- vi. The amount of release above typical emissions during malfunction/breakdown.

7.5.10 Reporting Requirements

- a. The Permittee shall promptly notify the Illinois EPA, Air Compliance Unit, of deviations of an affected blender with the permit requirements as follows, pursuant to Section 39.5(7)(f)(ii) of the Act. Reports shall describe the probable cause of such deviations, and any corrective actions or preventive measures taken:
 - i. Any deviation from the applicable permit requirements of Section 7.5 shall be reported to the Illinois EPA within 30 days of such occurrence. The report shall include the identity of the requirements for which a deviation occurred, a description of the deviation, its probable cause, and any corrective actions or preventive measures taken [39.5(7)(f)(ii) of the Act].
 - ii. Any violation of the requirements of 35 IAC 218
 Subpart AA shall be reported by sending a copy of any record showing a violation to the Illinois EPA,

Compliance Section, within 30 days following the occurrence of the violation.

b. Reporting of Malfunctions and Breakdowns

The Permittee shall provide the following notification and reports to the Illinois EPA, Air Compliance Unit and Regional Field Office, pursuant to 35 IAC 201.263, concerning continued operation of an affected blender subject to Condition 7.5.3(e) during malfunction or breakdown:

- i. The Permittee shall notify the Illinois EPA's regional office by telephone as soon as possible during normal working hours, but no later than three (3) days, upon the occurrence of noncompliance due to malfunction or breakdown.
- ii. Upon achievement of compliance, the Permittee shall give a written follow-up notice to the Illinois EPA, Air Compliance Unit and Regional Field Office, providing a detailed explanation of the event, an explanation why continued operation of the affected blender was necessary, the length of time during which operation continued under such conditions, the measures taken by the Permittee to minimize and correct deficiencies with chronology, and when the repairs were completed or when the affected blender was taken out of service.
- iii. If compliance is not achieved within 5 working days of the occurrence, the Permittee shall submit interim status reports to the Illinois EPA, Air Compliance Unit and Regional Field Office, within 5 days of the occurrence and every 14 days thereafter, until compliance is achieved. These interim reports shall provide a brief explanation of the nature of the malfunction or breakdown, corrective actions accomplished to date, actions anticipated to occur with schedule, and the expected date on which repairs will be complete or the affected blender will be taken out of service.

7.5.11 Operational Flexibility/Anticipated Operating Scenarios

The Permittee is authorized to make the following physical or operational change with respect to an affected blender without prior notification to the Illinois EPA or revision of this permit. This condition does not affect the Permittee's obligation to properly obtain a construction permit in a timely manner for any activity constituting construction or modification of the source, as defined in 35 IAC 201.102:

- a. Changes in raw materials and ink formulations, as long as such changes do not cause a violation of the emission limitations in Condition 5.6.1.
- b. Replacement of emission unit components in kind, provided that the replacement does not increase the amount of any specified air contaminant emitted by such equipment and does not result in the emission of any specified air contaminant not previously emitted.

7.5.12 Compliance Procedures

- a. Compliance with the PM limitations in this section is addressed by the proper operation, maintenance, and workpractices inherent in operation of each affected blender and associated control equipment.
- b. Compliance with emission limitations in this section and Condition 5.6.1 is addressed by the recordkeeping requirements in Condition 7.5.9 and by use of the formulae and emission factors listed in Attachment 5 or by use of emission factors derived from a site specific emission factor if that emission factor was developed from stack test data and based on the worst case scenario. Site specific VOM emission factors other than those listed in Attachment 5 shall be approved by the Illinois EPA, and the ERMS baseline shall be revised to reflect any new methods, pursuant to 35 IAC 205.337. (Note that emission factors in Attachment 5 were determined using procedures in Condition 5.12.1.)
 - i. Total VOM emissions from each affected blender = the sum of VOM emissions from process operations, process equipment leaks, solvent cleaning, tanker loading, and filter openings.
 - ii. VOM emissions from process operations, solvent cleaning, and filter openings:

VOM emissions = Production or Solvent Use (lb) \times VOM Content (%VOM) \times Emission Factor (lb/lb VOM).

iii. VOM emissions from process equipment leaks:

VOM emissions = Charging Hours (hr) x Emission Rate (lb/hr).

iv. VOM emissions from tanker loading:

VOM emissions = Number of Loads x Emission Factor (1b/load).

v. PM emissions from pigment mixing:

PM emissions = Production (lb) x Pigment Content (%)
x 0.001 lb/lb pigment x [1 - (Capture Efficiency, %)
x (Control Efficiency, %)]

Where 0.001 lb/lb pigment is the emission factor for pigment mixing, Table 6.7-1, AP-42, and the capture and control efficiencies are based on engineering estimates or manufacturer's recommendations.

c. Compliance of the affected blenders with the emission limitation in Condition 7.5.3(c) is addressed by the workpractices inherent in the operation of the affected blenders and the recordkeeping requirements in Condition 7.5.9(d).

7.6 Emission Units 19: Compound Operations

7.6.1 Description

Compounds is a batch operation producing wax compounds. In the Compounds Department, oil, hard wax, and other additives are added to a vessel, heated, and mixed. The wax compounds are then allowed to cool and packaged. VOM is emitted during charging, mixing, and packaging.

7.6.2 List of Emission Units and Air Pollution Control Equipment

			Emission
Emission		Date	Control
Unit	Description	Constructed	Equipment
19	2 Compound Tanks	Prior to	None
	(MCPD1-2)	1972	

7.6.3 Applicable Provisions and Regulations

- a. i. The "affected compound tanks" for the purpose of these unit specific conditions, are Compound Tanks MCPD1 and 2 (Emission Unit 19), which produce wax compounds through heating and mixing of raw materials.
 - ii. Each affected compound tank is subject to the emission limits identified in Condition 5.3.2.
- b. The affected compound tanks are subject to 35 IAC Section 218.301, which provides that no person shall cause or allow the discharge of more than 3.6 kg/hr (8 lb/hr) of organic material into the atmosphere from any emission unit, except as provided in 35 IAC 218.302 and with the following exception: if no odor nuisance exists the limitation shall apply only to photochemically reactive material.
- c. The affected compound tanks are subject to 35 IAC 212.322, which provides that:

No person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any existing process emission unit, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced prior to April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in subsection (c) of 35 IAC 212.322 (See also Attachment 2) [35 IAC 212.322(a)].

7.6.4 Non-Applicability of Regulations of Concern

- a. Each affected compound tank is not subject to 35 IAC 218, Subpart AA: Paint and Ink Manufacturing, because wax is not considered a paint or ink.
- b. Each affected compound tank is not subject to 35 IAC 218, Subpart QQ: Miscellaneous Formulation Manufacturing Processes, because no limits under this Subpart shall apply to emission units with emissions of VOM to the atmosphere less than or equal to 2.3 Mg (2.5 tons) per calendar year if the total emissions from such emission units not complying with does not exceed 4.5 Mg (5.0 tons) per calendar year [35 IAC 218.940(d)].
- c. This permit is issued based on the affected compound tanks not being subject to 40 CFR Part 64, CAM for Major Stationary Sources, because the affected compound tanks do not use an add-on control device to achieve compliance with an emission limitation or standard.

7.6.5 Control Requirements and Work Practices

Control requirements are not set for the affected compound tanks. However, there are source-wide requirements in the Standard Permit Conditions in Section 9. There may also be requirements for general source-wide control requirements set forth in Condition 5.5.

7.6.6 Production and Emission Limitations

Production and emission limitations are not set for the affected compound tanks. However, there are general source-wide production and emission limitations set forth in Condition 5.6.

7.6.7 Testing Requirements

a. Upon request of the Illinois EPA or USEPA, the VOM emissions from an affected compound tank shall be determined in accordance with Reference Method 18, 25 or 25A, specified in 40 CFR 60 Appendix A, pursuant to 35 IAC 218.105. Use of an adaptation of these test methods may not be used unless approved by the Illinois EPA and the USEPA on a case by case basis. The Permittee must submit sufficient documentation for the Illinois EPA and the USEPA to find that the test methods specified above will yield inaccurate results or are otherwise inappropriate and that the proposed adaptation is appropriate [35 IAC 218.105(f)].

7.6.8 Monitoring Requirements

Monitoring requirements are not set for the affected compound tanks. However, there may be provisions for source-wide

monitoring requirements set forth in Condition 5.8 of this permit.

7.6.9 Recordkeeping Requirements

In addition to the records required by Condition 5.9, the Permittee shall maintain records of the following items for each affected compound tank to demonstrate compliance with Conditions 5.6.1 and 7.6.3, pursuant to Section 39.5(7)(b) of the Act:

- a. Monthly and annual records of the following items for all affected compound tanks as a group:
 - i. Amount of wax compound production (ton/mo and ton/yr);
 - ii. VOM content for the wax production (weight percent);
 - iii. Total VOM emissions calculated based on the compliance procedures in Condition 7.6.12; and
 - iv. Calculations of maximum hourly VOM emissions, based on the compliance procedures in Condition 7.6.12.

7.6.10 Reporting Requirements

- a. The Permittee shall promptly notify the Illinois EPA, Air Compliance Unit, of deviations of an affected compound tank with the permit requirements, pursuant to Section 39.5(7)(f)(ii) of the Act. Reports shall describe the probable cause of such deviations, and any corrective actions or preventive measures taken.
- b. Upon request by the Illinois EPA, for any emission unit(s) which the Permittee claims to be exempt from the requirements of 35 IAC 218, Subpart QQ, the Permittee shall submit records to the Illinois EPA within 30 calendar days from the date of the request which document that the emission unit(s) is exempt from those requirements [35 IAC 218.990].

7.6.11 Operational Flexibility/Anticipated Operating Scenarios

The Permittee is authorized to make the following physical or operational change with respect to an affected compound tank without prior notification to the Illinois EPA or revision of this permit. This condition does not affect the Permittee's obligation to properly obtain a construction permit in a timely manner for any activity constituting construction or modification of the source, as defined in 35 IAC 201.102:

a. Changes in raw materials and ink formulations, as long as such changes do not cause a violation of the emission limitations in Condition 7.6.6 and Condition 5.6.1.

b. Replacement of emission unit components in kind, provided that the replacement does not increase the amount of any specified air contaminant emitted by such equipment and does not result in the emission of any specified air contaminant not previously emitted.

7.6.12 Compliance Procedures

- a. Compliance with the PM limitations in this section is addressed by the proper operation, maintenance, and work-practices inherent in operation of each affected compound tank.
- b. Compliance with emission limitations in this section and Condition 5.6.1 is addressed by the recordkeeping requirements in Condition 7.6.9 and by use of the formulae and emission factors listed in Attachment 5 or by use of emission factors derived from a site specific emission factor if that emission factor was developed from stack test data and based on the worst case scenario. Site specific VOM emission factors other than those listed in Attachment 5 shall be approved by the Illinois EPA, and the ERMS baseline shall be revised to reflect any new methods, pursuant to 35 IAC 205.337. (Note that emission factors in Attachment 5 were determined using procedures in Condition 5.12.1.)

 - ii. VOM emissions from process operations:

VOM emissions = Production or Solvent Use (lb) x VOM Content (%VOM) x Emission Factor (lb/lb VOM).

- iii. VOM emissions from process equipment leaks:
 - VOM emissions = Charging Hours (hr) x Emission Rate (lb/hr).
- c. Compliance of the affected compound tanks with the emission limitation in Condition 7.6.3(b) is addressed by the work-practices inherent in the operation of the affected compound tanks and the recordkeeping requirements in Condition 7.6.9(a).

7.7 Emission Units 20: UV Coating Operations Control: Scrubber

7.7.1 Description

UV is a batch operation producing ultraviolet cured coating. Raw materials, including vehicle, UV powders, and other additives, are charged to a vessel, mixed, and packaged. Minimal amounts of PM and VOM are emitted, and both pollutants are controlled by a wet scrubber.

7.7.2 List of Emission Units and Air Pollution Control Equipment

			Emission
Emission		Date	Control
Unit	Description	Constructed	Equipment
20	6 UV Mixers (UV1-6)	1990 (UV6	UV Wet Plate
		constructed	Scrubber
		in 1999)	(SCRB03)

7.7.3 Applicable Provisions and Regulations

- a. i. The "affected UV mixers" for the purpose of these unit specific conditions, are UV Mixers UV1 through 6 (Emission Unit 20), which produce UV coating through mixing of raw materials.
 - ii. Each affected UV mixer is subject to the emission limits identified in Condition 5.3.2.
- b. The affected UV mixers are subject to 35 IAC 218, Subpart AA: Paint and Ink Manufacturing, because the source has the potential to emit 22.7 Mg (25 tons) or more of VOM per year, in aggregate. These requirements are described in Conditions 5.5 and 7.7.5(a).
- c. The affected UV mixers are subject to 35 IAC Section 218.301, which provides that no person shall cause or allow the discharge of more than 3.6 kg/hr (8 lb/hr) of organic material into the atmosphere from any emission unit, except as provided in 35 IAC 218.302 and with the following exception: if no odor nuisance exists the limitation shall apply only to photochemically reactive material.
- d. The affected UV mixers are subject to 35 IAC 212.321, which provides that:

No person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates

specified in subsection (c) of 35 IAC 212.321 (See also Attachment 2) [35 IAC 212.321(a)].

e. Malfunction and Breakdown Provisions

The Permittee is authorized to continue operation of an affected UV mixer in violation of the applicable standards in Conditions 7.7.6 in the event of a malfunction or breakdown of the scrubber, subject to the following provisions. This authorization is provided pursuant to 35 IAC 201.262 as the Permittee has submitted proof that continued operation is required to provide essential service, prevent risk of injury to personnel or severe damage to equipment. This authorization supersedes the general prohibition in Condition 9.2.3 against continued operation in such circumstances:

- i. This authorization only allows such continued operation as necessary to provide essential service or prevent risk of injury to personnel or severe damage to equipment and does not extend to continued operation solely for the economic benefit of the Permittee. As provided by 35 IAC 201.265, this authorization does not shield the Permittee from enforcement for any such violation and shall only constitute a prima facie defense to such an enforcement action provided that the Permittee has fully complied with all associated terms and conditions.
- Upon occurrence of excess emissions due to ii. malfunction or breakdown, the Permittee shall as soon as practical reduce operation, repair, or remove the affected UV mixer from service so that excess emissions cease. Unless the Permittee obtains an extension from the Illinois EPA, this shall be accomplished within 7 days*. The Permittee may obtain an extension for up to a total of 7 days* from the Illinois EPA, Air Regional Office. The Illinois EPA, Air Compliance Section, in Springfield, may grant a longer extension if the Permittee demonstrates that extraordinary circumstances exist and the affected UV mixer can not reasonably be repaired or removed from service within the allowed time.
 - * For this purpose and other related provisions, time shall be measured from the start of a particular incident. The absence of excess emissions for a short period shall not be considered to end the incident if excess emissions resume. In such circumstances, the incident shall be considered to continue until corrective actions are taken so that excess

emissions cease or the Permittee takes the affected UV mixer out of service.

- iii. A. The Permittee shall fulfill the applicable recordkeeping and reporting requirements of Conditions 7.7.9(c) and 7.7.10(b).
 - B. Following notification to the Illinois EPA of a malfunction or breakdown with excess emissions, the Permittee shall comply with all reasonable directives of the Illinois EPA with respect to such incident, pursuant to 35 IAC 201.263.

7.7.4 Non-Applicability of Regulations of Concern

a. The affected UV mixers are not subject to 35 IAC 218, Subpart TT, because the requirements of 35 IAC 218, Subpart TT do not apply to a source's VOM emission units which are included within any of the categories specified in 35 IAC 218, Subpart AA [35 IAC 218.980(a)].

7.7.5 Control Requirements and Work Practices

The Permittee shall comply with the following requirements, in addition to the source wide requirements in Condition 5.5:

- a. Open-top mills, tanks, vats or vessels:
 - i. The mill, tank, vat or vessel is equipped with a cover which completely covers the mill, tank, vat or vessel opening except for an opening no larger than necessary to allow for safe clearance for a mixer shaft. Such cover shall extend at least 1.27 cm (0.5 in) beyond the outer rim of the opening or be attached to the rim [35 IAC 218.624(a)].
 - ii. The cover remains closed except when production, sampling, maintenance or inspection procedures require access [35 IAC 218.624(b)].
 - iii. The cover is maintained in good condition such that, when in place, it maintains contact with the rim of the opening for at least 90 percent of the circumference of the rim [35 IAC 218.624(c)].

7.7.6 Production and Emission Limitations

In addition to Condition 5.3.2 and the source-wide emission limitations in Condition 5.6, the affected UV mixers are subject to the following:

a. This permit is issued based on negligible emissions of VOM from each affected UV mixer and negligible emissions of PM from all affected UV mixers combined. For this purpose,

emissions of each regulated pollutant shall not exceed nominal emission rates of 0.44 ton/yr.

These limits are based on maximum operating rates, emission factors, and dust collector efficiencies. Compliance with annual limits shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total) [T1].

The above limitations were established in Joint Construction and Operating Permits 98120011 and 99070010, pursuant to 35 IAC Part 203. These limits ensure that the construction and/or modification addressed in the aforementioned construction permit does not constitute a new major source or major modification pursuant to Title I of the CAA, specifically 35 IAC Part 203 [T1].

7.7.7 Testing Requirements

a. Upon request of the Illinois EPA or USEPA, the VOM emissions from an affected UV mixer shall be determined in accordance with Reference Method 18, 25 or 25A, specified in 40 CFR 60 Appendix A, pursuant to 35 IAC 218.105. Use of an adaptation of these test methods may not be used unless approved by the Illinois EPA and the USEPA on a case by case basis. The Permittee must submit sufficient documentation for the Illinois EPA and the USEPA to find that the test methods specified above will yield inaccurate results or are otherwise inappropriate and that the proposed adaptation is appropriate [35 IAC 218.105(f)].

7.7.8 Monitoring Requirements

Monitoring requirements are not set for the affected UV mixers. However, there may be provisions for source-wide monitoring requirements set forth in Condition 5.8 of this permit.

7.7.9 Recordkeeping Requirements

In addition to the records required by Condition 5.9, the Permittee shall maintain records of the following items for each affected UV mixer to demonstrate compliance with Conditions 5.6.1 and 7.7.3 through 7.7.6, pursuant to Section 39.5(7)(b) of the Act:

- a. For each affected UV mixer, the Permittee shall maintain all records necessary to demonstrate compliance with 35 IAC 218, Subpart AA at the source for a period of three years [35 IAC 218.637(b)], or for such longer period as may be required by this permit (see Conditions 5.9.4 and 9.6.3).
- b. Monthly and annual records of the following items for all affected UV mixers as a group:

- i. Amount of UV coating production (ton/mo and ton/yr);
- ii. VOM and resin content for the UV coating production
 (weight percent);
- iii. Total VOM and PM emissions calculated based on the compliance procedures in Condition 7.7.12; and
- iv. Calculations of maximum hourly VOM emissions, based on the compliance procedures in Condition 7.7.12.
- c. Records for Malfunctions and Breakdowns

The Permittee shall maintain records, pursuant to 35 IAC 201.263, of continued operation of an affected UV mixer subject to Condition 7.7.3(e) during malfunctions and breakdown, which as a minimum, shall include:

- i. Date and duration of malfunction or breakdown.
- ii. A detailed explanation of the malfunction or breakdown.
- iii. An explanation why the affected UV mixer continued to operate in accordance with Condition 7.7.3(e).
- iv. The measures used to reduce the quantity of emissions and the duration of the event.
- v. The steps taken to prevent similar malfunctions or breakdowns or reduce their frequency and severity.
- vi. The amount of release above typical emissions during malfunction/breakdown.

7.7.10 Reporting Requirements

- a. The Permittee shall promptly notify the Illinois EPA, Air Compliance Unit, of deviations of an affected UV mixer with the permit requirements as follows, pursuant to Section 39.5(7)(f)(ii) of the Act. Reports shall describe the probable cause of such deviations, and any corrective actions or preventive measures taken:
 - i. Any deviation from the applicable permit requirements of Section 7.7, including emission limits in Condition 7.7.6, shall be reported to the Illinois EPA within 30 days of such occurrence. The report shall include the identity of the requirements for which a deviation occurred, a description of the deviation, its probable cause, and any corrective actions or preventive measures taken [39.5(7)(f)(ii) of the Act].

- ii. Any violation of the requirements of 35 IAC 218
 Subpart AA shall be reported by sending a copy of any
 record showing a violation to the Illinois EPA,
 Compliance Section, within 30 days following the
 occurrence of the violation.
- b. Reporting of Malfunctions and Breakdowns

The Permittee shall provide the following notification and reports to the Illinois EPA, Air Compliance Unit and Regional Field Office, pursuant to 35 IAC 201.263, concerning continued operation of an affected UV mixer subject to Condition 7.7.3(e) during malfunction or breakdown:

- i. The Permittee shall notify the Illinois EPA's regional office by telephone as soon as possible during normal working hours, but no later than three (3) days, upon the occurrence of noncompliance due to malfunction or breakdown.
- ii. Upon achievement of compliance, the Permittee shall give a written follow-up notice to the Illinois EPA, Air Compliance Unit and Regional Field Office, providing a detailed explanation of the event, an explanation why continued operation of the affected UV mixer was necessary, the length of time during which operation continued under such conditions, the measures taken by the Permittee to minimize and correct deficiencies with chronology, and when the repairs were completed or when the affected UV mixer was taken out of service.
- iii. If compliance is not achieved within 5 working days of the occurrence, the Permittee shall submit interim status reports to the Illinois EPA, Air Compliance Unit and Regional Field Office, within 5 days of the occurrence and every 14 days thereafter, until compliance is achieved. These interim reports shall provide a brief explanation of the nature of the malfunction or breakdown, corrective actions accomplished to date, actions anticipated to occur with schedule, and the expected date on which repairs will be complete or the affected UV mixer will be taken out of service.

7.7.11 Operational Flexibility/Anticipated Operating Scenarios

The Permittee is authorized to make the following physical or operational change with respect to an affected UV mixer without prior notification to the Illinois EPA or revision of this permit. This condition does not affect the Permittee's obligation to properly obtain a construction permit in a timely

manner for any activity constituting construction or modification of the source, as defined in 35 IAC 201.102:

- a. Changes in raw materials and ink formulations, as long as such changes do not cause a violation of the emission limitations in Condition 7.7.6 and Condition 5.6.1.
- b. Replacement of emission unit components in kind, provided that the replacement does not increase the amount of any specified air contaminant emitted by such equipment and does not result in the emission of any specified air contaminant not previously emitted.

7.7.12 Compliance Procedures

- a. Compliance with the PM limitations in this section is addressed by the proper operation, maintenance, and workpractices inherent in operation of each affected UV mixer and associated control equipment.
- b. Compliance with emission limitations in this section and Condition 5.6.1 is addressed by the recordkeeping requirements in Condition 7.7.9 and by use of the formulae and emission factors listed in Attachment 5 or by use of emission factors derived from a site specific emission factor if that emission factor was developed from stack test data and based on the worst case scenario. Site specific VOM emission factors other than those listed in Attachment 5 shall be approved by the Illinois EPA, and the ERMS baseline shall be revised to reflect any new methods, pursuant to 35 IAC 205.337. (Note that emission factors in Attachment 5 were determined using procedures in Condition 5.12.1.)
 - i. Total VOM emissions from each affected UV mixer = the sum of VOM emissions from process operations, process equipment leaks, solvent cleaning, and filter openings.
 - ii. VOM emissions from process operations, solvent cleaning, and filter openings:

VOM emissions = Production or Solvent Use (lb) \times VOM Content (%VOM) \times Emission Factor (lb/lb VOM).

iii. VOM emissions from process equipment leaks:

VOM emissions = Charging Hours (hr) x Emission Rate (lb/hr).

iv. PM emissions from resin mixing:

PM emissions = Production (lb) x Resin Content (%) x 0.001 lb/lb resin x [1 - (Capture Efficiency, %) x (Control Efficiency, %)]

Where 0.001 lb/lb resin is the emission factor for mixing, Table 6.7-1, AP-42, and the capture and control efficiencies are based on engineering estimates or manufacturer's recommendations.

c. Compliance of the affected UV mixers with the emission limitation in Condition 7.7.3(c) is addressed by the workpractices inherent in the operation of the affected UV mixers and the recordkeeping requirements in Condition 7.7.9(c).

8.0 GENERAL PERMIT CONDITIONS

8.1 Permit Shield

Pursuant to Section 39.5(7)(j) of the Act, the Permittee has requested and has been granted a permit shield. This permit shield provides that compliance with the conditions of this permit shall be deemed compliance with applicable requirements which were applicable as of the date the proposed permit for this source was issued, provided that either the applicable requirements are specifically identified within this permit, or the Illinois EPA, in acting on this permit application, has determined that other requirements specifically identified are not applicable to this source and this determination (or a concise summary thereof) is included in this permit.

This permit shield does not extend to applicable requirements which are promulgated after March 10, 2005 (the date of issuance of the draft permit) unless this permit has been modified to reflect such new requirements.

8.2 Applicability of Title IV Requirements (Acid Deposition Control)

This source is not an affected source under Title IV of the CAA and is not subject to requirements pursuant to Title IV of the CAA.

8.3 Emissions Trading Programs

No permit revision shall be required for increases in emissions allowed under any USEPA approved economic incentives, marketable permits, emissions trading, and other similar programs or processes for changes that are provided for elsewhere in this permit and that are authorized by the applicable requirement [Section 39.5(7)(o)(vii) of the Act].

8.4 Operational Flexibility/Anticipated Operating Scenarios

8.4.1 Changes Specifically Addressed by Permit

Physical or operational changes specifically addressed by the Conditions of this permit that have been identified as not requiring Illinois EPA notification may be implemented without prior notice to the Illinois EPA.

8.4.2 Changes Requiring Prior Notification

The Permittee is authorized to make physical or operational changes that contravene express permit terms without applying for or obtaining an amendment to this permit, provided that [Section 39.5(12) (a) (i) of the Act]:

- a. The changes do not violate applicable requirements;
- b. The changes do not contravene federally enforceable permit terms or conditions that are monitoring (including test

methods), recordkeeping, reporting, or compliance
certification requirements;

- c. The changes do not constitute a modification under Title I of the CAA;
- d. Emissions will not exceed the emissions allowed under this permit following implementation of the physical or operational change; and
- e. The Permittee provides written notice to the Illinois EPA,
 Division of Air Pollution Control, Permit Section, at least
 7 days before commencement of the change. This notice
 shall:
 - i. Describe the physical or operational change;
 - ii. Identify the schedule for implementing the physical or operational change;
 - iii. Provide a statement of whether or not any New Source
 Performance Standard (NSPS) is applicable to the
 physical or operational change and the reason why the
 NSPS does or does not apply;
 - iv. Provide emission calculations which demonstrate that the physical or operational change will not result in a modification; and
 - v. Provide a certification that the physical or operational change will not result in emissions greater than authorized under the Conditions of this permit.

8.5 Testing Procedures

Tests conducted to measure composition of materials, efficiency of pollution control devices, emissions from process or control equipment, or other parameters shall be conducted using standard test methods if applicable test methods are not specified by the applicable regulations or otherwise identified in the conditions of this permit.

Documentation of the test date, conditions, methodologies, calculations, and test results shall be retained pursuant to the recordkeeping procedures of this permit. Reports of any tests conducted as required by this permit or as the result of a request by the Illinois EPA shall be submitted as specified in Conditions 8.6.3 and 8.6.4.

8.6 Reporting Requirements

8.6.1 Monitoring Reports

Reports summarizing required monitoring as specified in the conditions of this permit shall be submitted to the Illinois EPA

every six months as follows, unless more frequent submittal of such reports is required in Sections 5 or 7 of this permit [Section 39.5(7)(f) of the Act]:

Monitoring Period

Report Due Date

January - June

September 1

July - December

March 1

All instances of deviations from permit requirements must be clearly identified in such reports. All such reports shall be certified in accordance with Condition 9.9.

8.6.2 Test Notifications

Unless otherwise specified elsewhere in this permit, a written test plan for any test required by this permit shall be submitted to the Illinois EPA for review at least 60 days prior to the testing pursuant to Section 39.5(7)(a) of the Act. The notification shall include at a minimum:

- a. The name and identification of the affected unit(s);
- b. The person(s) who will be performing sampling and analysis and their experience with similar tests;
- c. The specific conditions under which testing will be performed, including a discussion of why these conditions will be representative of maximum emissions and the means by which the operating parameters for the source and any control equipment will be determined;
- d. The specific determinations of emissions and operation that are intended to be made, including sampling and monitoring locations;
- e. The test method(s) that will be used, with the specific analysis method, if the method can be used with different analysis methods;
- f. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification; and
- g. Any proposed use of an alternative test method, with detailed justification.

8.6.3 Test Reports

Unless otherwise specified elsewhere in this permit, the results of any test required by this permit shall be submitted to the Illinois EPA within 60 days of completion of the testing. The

test report shall include at a minimum [Section 39.5(7)(e)(i) of the Act]:

- a. The name and identification of the affected unit(s);
- b. The date and time of the sampling or measurements;
- c. The date any analyses were performed;
- d. The name of the company that performed the tests and/or analyses;
- e. The test and analytical methodologies used;
- f. The results of the tests including raw data, and/or analyses including sample calculations;
- g. The operating conditions at the time of the sampling or measurements; and
- h. The name of any relevant observers present including the testing company's representatives, any Illinois EPA or USEPA representatives, and the representatives of the source.

8.6.4 Reporting Addresses

- a. Unless otherwise specified in the particular provision of this permit or in the written instructions distributed by the Illinois EPA for particular reports, reports and notifications shall be sent to the Illinois EPA - Air Compliance Unit with a copy sent to the Illinois EPA - Air Regional Field Office.
- b. As of the date of issuance of this permit, the addresses of the offices that should generally be utilized for the submittal of reports and notifications are as follows:
 - i. Illinois EPA Air Compliance Unit

Illinois Environmental Protection Agency Bureau of Air Compliance & Enforcement Section (MC 40) P.O. Box 19276 Springfield, Illinois 62794-9276

ii. Illinois EPA - Air Quality Planning Section

Illinois Environmental Protection Agency Bureau of Air Air Quality Planning Section (MC 39) P.O. Box 19276 Springfield, Illinois 62794-9276 iii. Illinois EPA - Air Regional Field Office

Illinois Environmental Protection Agency Division of Air Pollution Control 9511 West Harrison Des Plaines, Illinois 60016

iv. USEPA Region 5 - Air Branch

USEPA (A - 18J)
Air & Radiation Division
77 West Jackson Boulevard
Chicago, Illinois 60604

c. Permit applications should be addressed to the Air Permit Section. As of the date of issuance of this permit, the address of the Air Permit Section is as follows:

Illinois Environmental Protection Agency Division of Air Pollution Control Permit Section (MC 11) P.O. Box 19506 Springfield, Illinois 62794-9506

8.7 Obligation to Comply with Title I Requirements

Notwithstanding the expiration date on the first page of this CAAPP permit, Title I conditions in this permit, which are identified by a T1, T1N, or T1R designation, remain in effect until such time as the Illinois EPA takes action to revise or terminate them in accordance with applicable procedures for action on Title I conditions. This is because these conditions either: (a) incorporate conditions of earlier permits that were issued by the Illinois EPA pursuant to authority that includes authority found in Title I of the CAA (T1 conditions), (b) were newly established in this CAAPP permit pursuant to authority that includes such Title I authority (T1N conditions), or (c) reflect a revision or combination of conditions established in this CAAPP permit (T1R conditions). (See also Condition 1.5.)

9.0 STANDARD PERMIT CONDITIONS

9.1 Effect of Permit

- 9.1.1 The issuance of this permit does not release the Permittee from compliance with State and Federal regulations which are part of the Illinois State Implementation Plan, as well as with other applicable statutes and regulations of the United States or the State of Illinois or applicable ordinances, except as specifically stated in this permit and as allowed by law and rule.
- 9.1.2 In particular, this permit does not alter or affect the following [Section 39.5(7)(j)(iv) of the Act]:
 - a. The provisions of Section 303 (emergency powers) of the CAA, including USEPA's authority under that Section;
 - b. The liability of an owner or operator of a source for any violation of applicable requirements prior to or at the time of permit issuance;
 - c. The applicable requirements of the acid rain program consistent with Section 408(a) of the CAA; and
 - d. The ability of USEPA to obtain information from a source pursuant to Section 114 (inspections, monitoring, and entry) of the CAA.
- 9.1.3 Notwithstanding the conditions of this permit specifying compliance practices for applicable requirements, pursuant to Section 39.5(7)(j) and (p) of the Act, any person (including the Permittee) may also use other credible evidence to establish compliance or noncompliance with applicable requirements.

9.2 General Obligations of Permittee

9.2.1 Duty to Comply

The Permittee must comply with all terms and conditions of this permit. Any permit noncompliance constitutes a violation of the CAA and the Act, and is grounds for any or all of the following: enforcement action; permit termination, revocation and reissuance, or modification; or denial of a permit renewal application [Section 39.5(7)(o)(i) of the Act].

The Permittee shall meet applicable requirements that become effective during the permit term in a timely manner unless an alternate schedule for compliance with the applicable requirement is established.

9.2.2 Duty to Maintain Equipment

The Permittee shall maintain all equipment covered under this permit in such a manner that the performance or operation of such equipment shall not cause a violation of applicable requirements.

9.2.3 Duty to Cease Operation

No person shall cause, threaten or allow the continued operation of any emission unit during malfunction or breakdown of the emission unit or related air pollution control equipment if such operation would cause a violation of an applicable emission standard, regulatory requirement, ambient air quality standard or permit limitation unless this permit provides for such continued operation consistent with the Act and applicable Illinois Pollution Control Board regulations [Section 39.5(6)(c) of the Act].

9.2.4 Disposal Operations

The source shall be operated in such a manner that the disposal of air contaminants collected by the equipment operations, or activities shall not cause a violation of the Act or regulations promulgated there under.

9.2.5 Duty to Pay Fees

The Permittee must pay fees to the Illinois EPA consistent with the fee schedule approved pursuant to Section 39.5(18) of the Act, and submit any information relevant thereto [Section 39.5(7)(o)(vi) of the Act]. The check should be payable to "Treasurer, State of Illinois" and sent to: Fiscal Services Section, Illinois Environmental Protection Agency, P.O. Box 19276, Springfield, Illinois 62794-9276.

9.3 Obligation to Allow Illinois EPA Surveillance

Upon presentation of proper credentials and other documents as may be required by law and in accordance with constitutional limitations, the Permittee shall allow the Illinois EPA, or an authorized representative to perform the following [Sections 4 and 39.5(7)(a) and (p)(ii) of the Act]:

- a. Enter upon the Permittee's premises where an actual or potential emission unit is located; where any regulated equipment, operation, or activity is located or where records must be kept under the conditions of this permit;
- b. Have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit;
- c. Inspect during hours of operation any sources, equipment (including monitoring and air pollution control equipment),

practices, or operations regulated or required under this permit;

- d. Sample or monitor any substances or parameters at any location:
 - i. At reasonable times, for the purposes of assuring permit compliance or applicable requirements; or
 - ii. As otherwise authorized by the CAA, or the Act.
- e. Obtain and remove samples of any discharge or emission of pollutants authorized by this permit; and
- f. Enter and utilize any photographic, recording, testing, monitoring, or other equipment for the purposes of preserving, testing, monitoring, or recording any regulated activity, discharge or emission at the source authorized by this permit.

9.4 Obligation to Comply with Other Requirements

The issuance of this permit does not release the Permittee from applicable State and Federal laws and regulations, and applicable local ordinances addressing subjects other than air pollution control.

9.5 Liability

9.5.1 Title

This permit shall not be considered as in any manner affecting the title of the premises upon which the permitted source is located.

9.5.2 Liability of Permittee

This permit does not release the Permittee from any liability for damage to person or property caused by or resulting from the construction, maintenance, or operation of the sources.

9.5.3 Structural Stability

This permit does not take into consideration or attest to the structural stability of any unit or part of the source.

9.5.4 Illinois EPA Liability

This permit in no manner implies or suggests that the Illinois EPA (or its officers, agents or employees) assumes any liability, directly or indirectly, for any loss due to damage, installation, maintenance, or operation of the source.

9.5.5 Property Rights

This permit does not convey any property rights of any sort, or any exclusive privilege [Section 39.5(7)(o)(iv) of the Act].

9.6 Recordkeeping

9.6.1 Control Equipment Maintenance Records

A maintenance record shall be kept on the premises for each item of air pollution control equipment. At a minimum, this record shall show the dates of performance and nature of preventative maintenance activities.

9.6.2 Records of Changes in Operation

A record shall be kept describing changes made at the source that result in emissions of a regulated air pollutant subject to an applicable requirement, but not otherwise regulated under this permit, and the emissions resulting from those changes [Section 39.5(12) (b) (iv) of the Act].

9.6.3 Retention of Records

- a. Records of all monitoring data and support information shall be retained for a period of at least 5 years from the date of the monitoring sample, measurement, report, or application. Support information includes all calibration and maintenance records, original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by this permit [Section 39.5(7)(e)(ii) of the Act].
- b. Other records required by this permit including any logs, plans, procedures, or instructions required to be kept by this permit shall be retained for a period of at least 5 years from the date of entry unless a longer period is specified by a particular permit provision.

9.7 Annual Emissions Report

The Permittee shall submit an annual emissions report to the Illinois EPA, Air Quality Planning Section no later than May 1 of the following year, as required by 35 IAC Part 254.

9.8 Requirements for Compliance Certification

Pursuant to Section 39.5(7)(p)(v) of the Act, the Permittee shall submit annual compliance certifications. The compliance certifications shall be submitted no later than May 1 or more frequently as specified in the applicable requirements or by permit condition. The compliance certifications shall be submitted to the Air Compliance Unit, Air Regional Field Office, and USEPA Region 5 - Air Branch. The addresses for the submittal of the compliance certifications are provided in Condition 8.6.4 of this permit.

a. The certification shall include the identification of each term or condition of this permit that is the basis of the

certification; the compliance status; whether compliance was continuous or intermittent; the method(s) used for determining the compliance status of the source, both currently and over the reporting period consistent with the conditions of this permit.

- b. All compliance certifications shall be submitted to USEPA Region 5 in Chicago as well as to the Illinois EPA.
- c. All compliance reports required to be submitted shall include a certification in accordance with Condition 9.9.

9.9 Certification

Any document (including reports) required to be submitted by this permit shall contain a certification by a responsible official of the Permittee that meets the requirements of Section 39.5(5) of the Act and applicable regulations [Section 39.5(7)(p)(i) of the Act]. An example Certification by a Responsible Official is included as Attachment 1 to this permit.

9.10 Defense to Enforcement Actions

9.10.1 Need to Halt or Reduce Activity Not a Defense

It shall not be a defense for the Permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit [Section 39.5(7)(o)(ii) of the Act].

9.10.2 Emergency Provision

- a. An emergency shall be an affirmative defense to an action brought for noncompliance with the technology-based emission limitations under this permit if the following conditions are met through properly signed, contemporaneous operating logs, or other relevant evidence [Section 39.5(7)(k) of the Act]:
 - i. An emergency occurred as provided in Section 39.5(7)(k) of the Act and the Permittee can identify the cause(s) of the emergency.

Note: For this purpose, emergency means a situation arising from sudden and reasonably unforeseeable events beyond the control of the source, as further defined by Section 39.5(7)(k) (iv) of the Act.

- ii. The permitted source was at the time being properly operated;
- iii. The Permittee submitted notice of the emergency to the Illinois EPA within two working days of the time when emission limitations were exceeded due to the emergency. This notice must contain a detailed

description of the emergency, any steps taken to mitigate emissions, and corrective actions taken; and

- iv. During the period of the emergency the Permittee took all reasonable steps to minimize levels of emissions that exceeded the emission limitations, standards, or regulations in this permit.
- b. This provision is in addition to any emergency or upset provision contained in any applicable requirement. This provision does not relieve a Permittee of any reporting obligations under existing federal or state laws or regulations [Section 39.5(7)(k)(iv) of the Act].

9.11 Permanent Shutdown

This permit only covers emission units and control equipment while physically present at the indicated source location(s). Unless this permit specifically provides for equipment relocation, this permit is void for the operation or activity of any item of equipment on the date it is removed from the permitted location(s) or permanently shut down. This permit expires if all equipment is removed from the permitted location(s), notwithstanding the expiration date specified on this permit.

9.12 Reopening and Reissuing Permit for Cause

9.12.1 Permit Actions

This permit may be modified, revoked, reopened and reissued, or terminated for cause in accordance with applicable provisions of Section 39.5 of the Act. The filing of a request by the Permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition [Section 39.5(7)(o)(iii) of the Act].

9.12.2 Reopening and Revision

This permit must be reopened and revised if any of the following occur [Section 39.5(15)(a) of the Act]:

- a. Additional requirements become applicable to the equipment covered by this permit and three or more years remain before expiration of this permit.
- b. Additional requirements become applicable to an affected source for acid deposition under the acid rain program.
- c. The Illinois EPA or USEPA determines that this permit contains a material mistake or that inaccurate statement were made in establishing the emission standards or limitations, or other terms or conditions of this permit.

d. The Illinois EPA or USEPA determines that this permit must be revised or revoked to ensure compliance with the applicable requirements.

9.12.3 Inaccurate Application

The Illinois EPA has issued this permit based upon the information submitted by the Permittee in the permit application. Any misinformation, false statement or misrepresentation in the application shall be grounds for revocation and reissuance under Section 39.5(15) of the Act, pursuant to Sections 39.5(5) (e) and (i) of the Act.

9.12.4 Duty to Provide Information

The Permittee shall furnish to the Illinois EPA, within a reasonable time specified by the Illinois EPA any information that the Illinois EPA may request in writing to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit, or to determine compliance with this permit. Upon request, the Permittee shall also furnish to the Illinois EPA copies of records required to be kept by this permit, or for information claimed to be confidential, the Permittee may furnish such records directly to USEPA along with a claim of confidentiality [Section 39.5(7)(o)(v) of the Act].

9.13 Severability Clause

The provisions of this permit are severable. In the event of a challenge to any portion of the permit, other portions of the permit may continue to be in effect. Should any portion of this permit be determined to be illegal or unenforceable, the validity of the other provisions shall not be affected and the rights and obligations of the Permittee shall be construed and enforced as if this permit did not contain the particular provisions held to be invalid and the applicable requirements underlying these provisions shall remain in force [Section 39.5(7)(i) of the Act].

9.14 Permit Expiration and Renewal

Upon the expiration of this permit, if the source is operated, it shall be deemed to be operating without a permit unless a timely and complete CAAPP application has been submitted for renewal of this permit. However, if a timely and complete application to renew this CAAPP permit has been submitted, the terms and all conditions of this CAAPP permit will remain in effect until the issuance of a renewal permit [Section 39.5(5)(1) and (o) of the Act].

Note: Pursuant to Sections 39.5(5)(h) and (n) of the Act, upon submittal of a timely and complete renewal application, the permitted source may continue to operate until final action is taken by the Illinois EPA on the renewal application, provided, however, that this protection shall cease if the applicant fails to submit any additional information necessary to evaluate or take final action on the renewal

application as requested by the Illinois EPA in writing. For a renewal application to be timely, it must be submitted no later than 9 months prior to the date of permit expiration.

9.15 General Authority for the Terms and Conditions of this Permit

The authority for terms and conditions of this permit that do not include a citation for their authority is Section 39.5(7)(a) of the Act, which provides that the Illinois EPA shall include such provisions in a CAAPP permit as are necessary to accomplish the purposes of the Act and to assure compliance with all applicable requirements. Section 39.5(7)(a) of the Act is also another basis of authority for terms and conditions of this permit that do include a specific citation for their authority.

Note: This condition is included in this permit pursuant to Section 39.5(7) (n) of the Act.

10.0 ATTACHMENTS

Attachment 1 Example Certification by a Responsible Official

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Attachment 2 Emissions of Particulate Matter from Process Emission Units

- a. New Process Emission Units for Which Construction or Modification Commenced On or After April 14, 1972 [35 IAC 212.321].
 - i. No person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in subsection (c) of 35 IAC 212.321 [35 IAC 212.321(a)].
 - ii. Interpolated and extrapolated values of the data in subsection (c) of 35 IAC 212.321 shall be determined by using the equation [35 IAC 212.321(b)]:

$$E = A(P)^B$$

where:

P = Process weight rate; and

E = Allowable emission rate; and,

A. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lb/hr
A	1.214	2.54
В	0.534	0.534

B. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English
Р	Mg/hr	T/hr
E	kg/hr	lb/hr
A	11.42	24.8
В	0.16	0.16

iii. Limits for Process Emission Units For Which Construction or Modification Commenced On or After April 19, 1972 [35 IAC 212.321(c)]:

Metric P	E	English P	E
Mg/hr	kg/hr	<u>T/hr</u>	<u>lb/hr</u>
0.05	0.25	0.05	0.55
0.1	0.29	0.10	0.77
0.2	0.42	0.2	1.10
0.3	0.64	0.30	1.35
0.4	0.74	0.40	1.58
0.5	0.84	0.50	1.75
0.7	1.00	0.75	2.40
0.9	1.15	1.00	2.60
1.8	1.66	2.00	3.70
2.7	2.1	3.00	4.60
3.6	2.4	4.00	5.35
4.5	2.7	5.00	6.00
9.0	3.9	10.00	8.70
13.0	4.8	15.00	10.80
18.0	5.7	20.00	12.50
23.0	6.5	25.00	14.00
27.0	7.1	30.00	15.60
32.0	7.7	35.00	17.00
36.0	8.2	40.00	18.20
41.0	8.8	45.00	19.20
45.0	9.3	50.00	20.50
90.0	13.4	100.00	29.50
140.0	17.0	150.00	37.00
180.0	19.4	200.00	43.00
230.0	22.0	250.00	48.50
270.0	24.0	300.00	53.00
320.0	26.0	350.00	58.00
360.0	28.0	400.00	62.00
408.0	30.1	450.00	66.00
454.0	30.4	500.00	67.00

- b. Existing Process Emission Units for Which Construction or Modification Prior to April 14, 1972 [35 IAC 212.322].
 - i. No person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any process emission unit for which construction or modification commenced prior to April 14, 1972, which, either alone or in combination with the emission of particulate matter from all other similar process emission units at a source or premises, exceeds the allowable emission rates specified in subsection (c) of 35 IAC 212.322 [35 IAC 212.322(a)].
 - ii. Interpolated and extrapolated values of the data in subsection (c) of 35 IAC 212.321 shall be determined by using the equation [35 IAC 212.322(b)]:

$$E = C + A(P)^B$$

where:

P = Process weight rate; and

E = Allowable emission rate; and,

A. Up to process weight rates up to 27.2 Mg/hr (30 $\,\mathrm{T/hr}$):

	<u>Metric</u>	English
Р	Mg/hr	T/hr
E	kg/hr	lb/hr
A	1.985	4.10
В	0.67	0.67
C	0	0

B. For process weight rate in excess of 27.2 Mg/hr (30 T/hr):

	<u>Metric</u>	English
P	Mg/hr	T/hr
E	kg/hr	lb/hr
A	25.21	55.0
В	0.11	0.11
С	- 18.4	- 40.0

iii. Limits for Process Emission Units For Which Construction or Modification Commenced Prior to April 14, 1972 [35 IAC 212.322(c)]:

Metric P <u>Mg/hr</u>	E kg/hr	English P <u>T/hr</u>	E <u>lb/hr</u>
0.05 0.1 0.2 0.3 0.4 0.5 0.7 0.9 1.8 2.7 3.6 4.5 9.0 13.0 18.0 23.0 27.2 32.0 36.0 41.0 45.0 90.0 140.0 180.0 230.0 270.0 320.0 360.0 400.0	0.27 0.42 0.68 0.89 1.07 1.25 1.56 1.85 2.9 3.9 4.7 5.4 8.7 11.1 13.8 16.2 18.15 18.8 19.3 19.8 20.2 23.2 25.3 26.5 27.7 28.5 29.4 30.0 30.6	0.05 0.10 0.2 0.30 0.40 0.50 0.75 1.00 2.00 3.00 4.00 5.00 10.00 15.00 20.00 25.00 30.00 35.00 40.00 45.00 50.00 100.00 150.00 100.00 150.00 100.00 150.00 100.00 150.00 100.00 150.00 100.00 150.00 100.00 150.00 100.00 150.00 100.00 150.00 100.00 150.00 100.00 150.00 100.00 150.00 100.00 150.00 100.00 150.00 100.00 150.00 100.00 150.00 100.00	0.55 0.87 1.40 1.83 2.22 2.58 3.38 4.10 6.52 8.56 10.40 12.00 19.20 25.20 30.50 35.40 40.00 41.30 42.50 43.60 44.60 51.20 55.40 58.60 61.00 63.10 64.90 66.20 67.70

Attachment 3 Compliance Assurance Monitoring (CAM) Plan

There are no specific emission units that require a CAM plan as identified in the Monitoring Requirements of Subsection 8 for each Section 7, Unit Specific Conditions for Specific Emission Units.

Attachment 4 Guidance

The Illinois has prepared guidance for sources on the Clean Air Act Permit Program (CAAPP) that is available on the Internet site maintained by the Illinois EPA, www.epa.state.il.us. This guidance includes instructions on applying for a revision or renewal of the CAAPP permit.

Guidance On Revising A CAAPP Permit:

www.epa.state.il.us/air/caapp/caapp-revising.pdf

Guidance On Renewing A CAAPP Permit:

www.epa.state.il.us/air/caapp/caapp-renewing.pdf

The application forms prepared by the Illinois EPA for the CAAPP are also available from the Illinois EPA's Internet site:

www.epa.state.il.us/air/caapp/index.html

These CAAPP application forms should also be used by a CAAPP source when it applies for a construction permit. For this purpose, the appropriate CAAPP application forms and other supporting information, should be accompanied by a completed Application For A Construction Permit form (199-CAAPP) and Fee Determination for Construction Permit Application form (197-FEE):

www.epa.state.il.us/air/caapp/199-caapp.pdf
www.epa.state.il.us/air/permits/197-fee.pdf

Attachment 5 Emission Factors for Ink Manufacturing Lines

The following are VOM emission factors, as determined according to the procedures in Section 5.12.1. These emission factors include the contribution of any process condensers for those emission units that have process condensers.

Emission Unit	Emission Point	Emission Factor
Ball Mills	Process Operations	0.00199 lb/lb VOM
	Process Equipment Leaks	0.7493 lb/hr
	Tanker Loading	0.615 lb/load
	Filter Openings	0.000113 lb/lb VOM
Regular Grinding	Process Operations	0.0152 lb/lb VOM
	Process Equipment Leaks	0.1940 lb/hr
	Solvent Cleaning	0.0152 lb/lb VOM,
		0.00282 lb/lb VOM (caustic)
Bulk Grinding	Process Operations	0.00196 lb/lb VOM
	Process Equipment Leaks	
	Solvent Cleaning	0.00063 lb/lb VOM
	Filter Openings	0.0000355 lb/lb VOM
Cutters	Process Operations	0.00095 lb/lb VOM
	Process Operations	0.0039 lb/lb VOM
	(Cutter #20)	
	Process Operations	0.000665 lb/lb VOM
	(Cutter #21)	
	Process Equipment Leaks	
	Solvent Cleaning	0.00132 lb/lb VOM
	Tanker Loading	0.649 lb/load
	Filter Openings	0.0000444 lb/lb VOM
Blending	Process Operations	0.0130 lb/lb VOM
	Process Equipment Leaks	
	Solvent Cleaning	0.0130 lb/lb VOM,
		0.00282 lb/lb VOM (caustic)
Compounds	Process Operations	0.0029 lb/lb VOM
	Process Equipment Leaks	
UV Coating	Process Operations	0.0172 lb/lb VOM
	Process Equipment Leaks	
	Solvent Cleaning	0.00184 lb/lb VOM
	Filter Openings	0.0000442 lb/lb VOM

Attachment 6 Net Emissions Increase Determinations

a. Net VOM emissions increase determination from Permit 01070053, issued on February 26, 2002 (contemporaneous time period is 1997 through 2001).

Table I - Emission Increases Associated with the Proposed Modification

	Proposed	VOM Emissions
	Commencement of	Increase
Item of Equipment	Operation Date	(Tons/Year)
Ball Mill #33	2001	2.57

Table II - Source-wide Creditable Contemporaneous Emissions Increases

		VOM Emissions
	Commencement of	Increase
Item of Equipment	Operation Date	(Tons/Year)
Basket Mill Premix (Permit 00050090)	2000	6.18

<u>Table III - Overall Emissions Increase</u>

	VOM Emissions (Tons/Year)
Increases Associated With The Proposed Modification	2.57
Contemporaneous Emission Increases	<u>6.18</u>
Total Increases 1997 - 2001	8.75

These tables do not rely upon a contemporaneous decrease from the shutdown of the emission unit groups as described in the Application 01070053, because total increases for the period 1997 through 2001 are less than 25 tons/year.

b. Net VOM emissions increase determination from Permit 02020036, issued on July 10, 2002.

Table I - Permitted Project Emissions

	VOM Emissions
Item of Equipment	(Tons/Year)
Premixers 5-6 and Vertical Shot Mills 1-4	22.45
Cutters #20 and #21	1.35

Table II - Contemporaneous Emissions Increases

Item of Equipment	Construction <u>Permit</u>	VOM Emissions (Tons/Year)
Ball Mill #33	01070053	2.57
Basket Mill Premix	00050090	6.18

Table III - Contemporaneous Emissions Decreases

Equipment permanently shutdown upon startup of new equipment listed in Permit 02020036.

	VOM Emissions
Item of Equipment	(Tons/Year)
Ball Mill #24	- 0.28
Ball Mill #27	- 0.11
Ball Mill #28	- 0.03
Ball Mill #29	- 0.11
Ball Mill #30	- 0.03
Blending Mixers 3-10	- 10.53
Blending Air Mixers 1-5	- 0.22
Inkmaker	- 0.91
Varnish (Kettles 1-3 and 8 tanks)	- 5.28
Kady Mills (MK 1-3)	- 0.03
Premixer 3, Horizontal Mills 1-4	- 3.26

<u>Table IV - Overall Emissions Increase</u>

	VOM Emissions (Tons/Year)
Increases Associated With The Proposed Modification	23.80
Contemporaneous Emission Increases Contemporaneous Emission Decreases	$-\frac{8.75}{20.80}$
Total Increase	11.75
